REHABILITATION COUNCIL OF INDIA

**CHHATRAPATI SHAHU JI MAHARAJ
UNIVERSITY, KANPUR**

ABOUT THE CHHATRAPATI SHAHU JI MAHARAJ UNIVERSITY

Chhatrapati Shahu Ji Maharaj University (CSJMU), Kanpur, formerly known as Kanpur University, is one of the leading institutions of higher education in Uttar Pradesh. Established in 1966, the university is committed to academic excellence and research-driven education. Spanning a campus of over 260 acres in Kalyanpur, Kanpur, CSJMU offers a wide array of undergraduate, postgraduate, diploma, and doctoral programs across multiple disciplines. Accredited with an A++ grade by the National Assessment and Accreditation Council (NAAC), the university is a hub for innovation and academic development, serving as the affiliating body for more than 900 colleges in the region.

Campus Facilities and Amenities at CSJM University, Kanpur

CSJM University is committed to providing a vibrant and holistic environment that supports academic excellence, innovation, well-being, and personal growth. The university campus is equipped with a wide range of modern facilities and services to cater to the diverse needs of students, faculty, and visitors.

Academic and Co-Curricular Infrastructure

- Auditorium – A state-of-the-art venue for seminars, conferences, and cultural events.
- Lecture Hall Complex – Spacious and well-equipped lecture theatres for effective teaching and learning.
- Multipurpose Hall – A flexible space for hosting academic and extracurricular activities.

Communication Services

- Post Office – On-campus postal services for the convenience of students and staff.

Connectivity and Access

- Helipad – Ensures swift connectivity for dignitaries and

emergency services.

- Vishwavidyalaya Metro Station – Enhances easy accessibility to and from the university campus.

Green and Sustainable Campus

Refreshment Facilities

Essential Services and Other Amenities

- Banks – On-campus banking services for financial transactions.
- Police Chowki & Security – Round-the-clock security and law enforcement presence for safety.
- Legal Aid Clinic – Provides free legal assistance and promotes legal awareness.
- Centralized Parking Facility – Organized and ample parking space for vehicles.

IT and Academic Support

- Data Centre – Provides digital infrastructure and computing services.
- Central Library – A rich repository of academic resources and reading materials.
- Computer Center – Facilitates digital learning and computational needs.

Residential Facilities

- Guest House – Comfortable lodging for visiting guests and dignitaries.
- Hostels – (Separate girls' and boys' hostels) Safe and well-maintained accommodations for students.
- International Center – Dedicated space for international collaborations and exchange programs.

Research and Innovation

- Central Instrumentation Facility – Advanced tools and equipment to support scientific research and innovation.

Spiritual and Cultural Spaces

Sports and Health Facilities

- Gymnasium & Open Gym – Promotes fitness and physical well-being.
- Health Center – On-campus medical services for students and staff.
- Swimming Pool & Stadium – Infrastructure for aquatic and field sports.
- Yoga Center – Encourages mental and physical harmony through regular practice.

Student Support Services

- Placement Cell – Assists students in career planning and job placement.
- Student Support Cell – Addresses academic and administrative concerns of students.
- Center for Wellbeing: Assists to prompt and heal mental health of students.

ABOUT THE DEPARTMENT OF CLINICAL PSYCHOLOGY

The Department of Clinical Psychology, CSJMU, Kanpur, is dedicated to the academic and professional advancement of students in the field of psychology and mental health. The department currently offers the following academic programs:

- **B.A. (Hons.) in Psychology**
- **Post Graduate Diploma in Guidance and Counselling**
- **B.Sc. (Hons.) in Clinical Psychology (RCI-approved)**
- **M.A. in Clinical Psychology (RCI-approved)**

With recent recognition from the Rehabilitation Council of India (RCI), the department has expanded its academic portfolio to include professional training courses that prepare students for careers in clinical and rehabilitation settings.

The department boasts a **well-equipped laboratory** for psychological assessments and practical training, ensuring hands-on experience in diagnostic tools and therapeutic techniques. It is supported by a team of highly qualified and experienced faculty members, committed to providing quality education, mentorship, and clinical supervision.

Students benefit from access to the university's state-of-the-art **Central Library**, which houses an extensive collection of academic and professional resources in psychology and allied sciences. The department is situated within a vibrant and resource-rich campus that includes modern classrooms, digital infrastructure, and student-friendly amenities.

With a strong focus on both theoretical foundations and practical applications, the Department of Clinical Psychology aims to foster the development of competent, ethical, and socially responsible mental health professionals.

The Department of Clinical Psychology is pleased to announce the launch of RCI-approved academic programs in *B.Sc. (Hons.) Clinical Psychology* and *M.A. Clinical Psychology*. **These programs are introduced in accordance with the guidelines and standards set by the Rehabilitation Council of India (RCI)**, with the aim of developing qualified mental health professionals. The curriculum prescribed by RCI will be implemented in its entirety, ensuring comprehensive theoretical knowledge, practical training, and supervised clinical exposure. These courses are designed to equip students with the necessary competencies to work effectively in diverse mental health and rehabilitation settings, and to contribute meaningfully to the mental well-being of individuals and communities.

The ordinance and guidelines will remain same as provided by RCI. These programs will run by Department of Clinical Psychology, under the faculty of advanced studies and Social Sciences.

M.A. IN CLINICAL PSYCHOLOGY

PREAMBLE

Clinical psychology as one of the core disciplines in the area of mental health/illness has grown significantly in the last two decades. Today, the clinical psychology training is being offered at more than seventy recognized centers across the country with utmost efficiency. Consequently, the number of clinical psychologists' available in-service sectors has increased significantly. Though there is an upward trend, number of professionals currently available at various levels is no match to the number specified to face the ever-growing demands in the field of mental health.

Mental health problems are continuously on the rise owing to change in life style, habits and mounting stress in personal/occupational/social domains across various sections of the society. Clinical Psychologists apply knowledge and methods from all substantive fields of biopsychosocial sciences for promotion and maintenance of mental health of individuals. Varieties of techniques and methods derived from several branches of psychology are used in promotion of mental health, and in prevention, diagnosis, treatment and rehabilitation of mental and physical disorders/ problems where psychological factors play a major role. Different methods and forms of psychological techniques are used to relieve an individual's emotional distress or any other forms of dysfunction or disability. Thus, Clinical Psychologists play an important role for optimizing healthcare delivery system and there is an urgent need to train a greater number of professional clinical psychologists.

The Council is committed to give the needed impetus to human resource development in the field of clinical psychology and work towards establishing more centers for training in clinical psychology in the coming years. Also, efforts will be made to ameliorate unequal distribution and under-utilization of human resource pool created to equip our professionals with the latest developments in the field through CRE programs, so that they deliver patient-centered services effectively and competently.

In the recent times, a trend has been observed for training in clinical psychology

to be shifted from traditional mental hospital-based programs to programs offered by higher education institutions including medical colleges and NGOs. Consequently, there has been a steady progress in increasing manpower for practice and research in clinical psychology. Though, the feedback received from the participants of these training programs is encouraging, it is our endeavor to keep pace with changing times and make available the most updated information for trainees in various settings.

The Council hopes that the following revised guidelines would help centers conducting M. A. Clinical Psychology program to provide a cohesive and meaningful training so that the trainees develop to their fullest potential and shall be able to discharge their responsibilities competently as clinicians, teachers/trainers, researchers and administrators in the field of mental health. This document is also meant to serve as guidelines for institutions intending to start the training program in clinical psychology to strengthen their resource base in terms of infrastructure and personnel for providing an effective training in the field of clinical psychology.

The syllabus is specified in terms of hands-on experiential training with sound theoretical foundations. The teachers need to be aware of these components and impart training for progressive development of skills, knowledge and understanding of various techniques, theories, approaches and methods. This model will allow all trainees to develop a range of skills and knowledge essential to the practice of clinical psychology.

Depending on the available resources and expertise at the Centre, offering this Programme, the appropriate academic formats in content area of each paper can be worked out. Though a standardized structure is adopted across different papers, sufficient flexibility to enrich the learning and training experience of the trainees is also incorporated. The practical and clinical work should be used to integrate all learning across the subjects, such as Psychiatry, Neurology, Cardiology, Oncology, Pediatrics etc. while learning being used at varying stages to integrate and apply knowledge and skills developed.

The current syllabus will accommodate the incorporation of any new and emerging practices/trends into the content areas as practice change. Therefore, inclusion of additional study, emerging concepts/practices etc. into the training program so that the training reflects current practices and trends, is the sole responsibility of the Centre. For the wider exposure and enriched learning of the trainees, additional inputs may be required by deputing the trainees at the suitable settings such as school, community, sports and rehabilitation centers, defense (military and para-military) and forensic centers etc. The training institute can act at its discretion as long as it reflects national and international practices, and does not compromise with the mandate of this Programme and learning activities suggested in the core model.

Teachers are required to apprise themselves of the latest developments in the field of clinical psychology through conferences, seminars, workshops and other national and international professional development programmes to ensure delivery of quality education and training. The centers should therefore make enough provisions for the teachers to upgrade their knowledge/skills as often as it required.

Dissertation projects could be flexible or specialized to suit the center needs and priorities. However, the topic of study should reflect contemporary developments and practices, and the trainees would have had an opportunity to use a range of techniques, tools and approaches to solve problem while executing the research project.

AIM & OBJECTIVES

AIM

The aim of this Programme is to prepare trained Clinical Psychologist to function as an independent clinician, competent to deliver mental, physical and rehabilitative healthcare services.

OBJECTIVES

The course is developed as a rigorous two-year program with extensive theoretical inputs and widespread clinical experience to acquire the necessary skills in the

area of Clinical Psychology. On completion of the course, the trainee is expected to perform the following functions:

1. Diagnose and assess mental health problems.
2. Conceptualize specific child, adolescent, adult and geriatric mental health problems within a psychological framework, giving due consideration to psychosocial/ contextual factors, and carryout relevant treatment/management.
3. Apply psychological principles and techniques in rehabilitating persons with mental health problems and disabilities.
4. Work with the psychosocial dimensions of physical diseases, formulate and undertake focused/targeted psychosocial interventions.
5. Work with community to promote health, quality-of-life and psycho-logical well-being.
6. Undertake research in the areas of clinical psychology such as, mental health/illness, physical health/diseases and relevant societal issues viz. misconception, stigma, discrimination, social tension, gender construction, life style etc.
7. Undertake responsibilities associated with teaching and training in core and allied areas of Clinical Psychology.
8. Undertake administrative and supervisory/decision-making responsibilities in mental health area.
9. Provide expert testimony in the court of law assuming different roles

PROGRAMME OUTCOMES (POS) OF M.A. CLINICAL PSYCHOLOGY:

1. **Advanced Knowledge in Clinical Psychology:** Gain in-depth understanding of theories, models, and evidence-based practices in assessment, diagnosis, and psychotherapy.
2. **Competence in Clinical Assessment:** Acquire practical skills in administering, scoring, interpreting, and reporting standardized psychological tests for cognitive,

personality, emotional, and neuropsychological functioning.

3. Diagnostic Proficiency: Develop competence in applying DSM and ICD diagnostic criteria to formulate case conceptualizations for diverse mental health conditions.

4. Evidence-Based Psychotherapy Skills: Learn and demonstrate proficiency in planning and delivering evidence-based psychotherapeutic interventions (e.g., CBT, behaviour therapy, family therapy) for individuals and groups.

5. Ethical and Legal Understanding: Demonstrate awareness of ethical principles, confidentiality, professional boundaries, and RCI guidelines in clinical practice.

6. Research Literacy and Practice: Acquire skills in designing, conducting, and disseminating psychological research relevant to clinical settings.

7. Cultural and Contextual Sensitivity: Understand and address cultural, social, and contextual factors in assessment and intervention, promoting inclusivity and respect for diversity.

8. Rehabilitation Planning and Delivery: Develop abilities to plan, implement, and evaluate rehabilitation strategies for persons with mental illness, disabilities, or special needs.

9. Interdisciplinary Collaboration: Cultivate effective communication and collaboration with other professionals in healthcare and rehabilitation teams.

10. Professional Development and Lifelong Learning: Foster a commitment to ongoing learning, self-reflection, and skill enhancement to maintain professional competence in clinical psychology.

ENTRY REQUIREMENT

Minimum educational requirement for admission to this course will be 4 years B.A./B.Sc. degree in Psychology from a university recognized by the UGC with a minimum of 55% marks in aggregate. For SC/ST category, minimum of 50% marks in aggregate is essential, as per GOI. The candidates who have

completed their graduation Programme in 3 years shall have to pass fourth year Bridge Course or first year of Masters Programme in Psychology with minimum of 55% marks are also eligible.

ADMISSION PROCEDURE

- **Application Mode:** Online through the CSJMU Admission Portal
- **Selection Criteria:** Based on Entrance Test + Interview (the weightage of entrance test shall be 70% whereas the interview will be of 30%).
- There shall be Computer Based Test consisting of 100 MCQs type questions to be answered in 90 minutes. ONE mark will be given for the correct response. No marks would be deducted for the wrong answer. The shortlisted candidates shall be called for interview. The Computer Based Test (CBT) will have questions of UG/PG standard. The Computer Based Test holds 100 marks and Interview hold 50 marks. The selection of candidates to the course will be based on total marks obtained in Computer Based Test and Interview.
- **Reservation Policy:** As per U.P. Government norms.
- **SEATS: 10**
- List of candidates so selected/ admitted to the course must be sent to RCI within a month of admission formalities are completed. No changes shall be permitted once the list of admitted candidates for the academic year is sent to the Council. The institute shall advertise the admission dates, number of seats and the procedure in national daily, a regional paper, institute's website and social media platform. The admission procedure must be disabled friendly.

Fees Structure:

- 1,55,200 per year
(Subject to revision as per university norms)

DURATION

This is a fulltime clinical training course providing opportunities for appropriate practicum and apprenticeship experiences for 2 academic years.

Upon successful completion of the program, students are conferred registration

in the Central Rehabilitation Register (**CRR**) with the professional designation of **“Clinical Psychologist.”**

FACILITIES AVAILABLE IN THE DEPARTMENT OF CLINICAL PSYCHOLOGY

(In Accordance with RCI Guidelines for Successfully Conducting the Course)

- Program is conducted in an independent Department of Clinical Psychology within the University.
- Department is headed by a qualified Clinical Psychology faculty (Professor/Associate Professor) registered with RCI.
- **Dedicated Faculties** & adequate staffs
- **Clinical Infrastructure:** The Department has established MoUs with various clinical and allied institutions to ensure comprehensive practical exposure and training. These include:
 - Department of Psychiatry
 - Special Schools
 - Schools for Children with Disabilities
 - Departments of Behavioral Medicine & Allied SciencesThese collaborations facilitate effective clinical training and support the successful implementation of the program as per RCI norms.
- Department is equipped with all necessary psychological tools/tests/equipment for training in adequate quantity.
- Facilities meet RCI Infrastructure Norms, including:
 - ICT-enabled classrooms
 - Central library
 - Psychological testing cubicles
 - Biofeedback/Behaviour therapy room
 - Well-equipped Laboratory
 - Seminar hall
 - Counselling Sessions room
 - Barrier-free environment
 - Computer lab

- All necessary facilities

➤ **Clinical Training Provisions:** Clinical training is supervised by Clinical Psychology faculty. Students gain practical exposure in:

- Hospitals and community health settings
- Psychiatric set up/De-addiction centers
- Special Schools and educational institutions
- Rehabilitation and disability-related centers
- Organizational and corporate settings
- Students gain exposure from child to geriatric population.
- Opportunities for experiential learning via educational trips.

ATTENDANCE

Course of the study must, unless special exemption is obtained, continuously be pursued. Any interruption in a candidate's attendance during the course of study, due to illness or other extraordinary circumstances must be notified to the Head of the Institution/concerned authority and permission should be obtained.

A minimum attendance of 80% (in each year including in all academic activities) shall be necessary for taking the respective examination.

Thirty days of casual leave, maximum of fifteen days per academic year, shall be permitted during the two-year course period.

BOARD OF EXAMINATION

The University will conduct the examinations having a board consisting of two examiners of which one shall be an external Rehabilitation/Clinical Psychology faculty (with Ph.D. qualification) appointed for this purpose, and the other shall be an internal Rehabilitation/Clinical Psychology faculty. Both internal and external examiners shall evaluate dissertation and conduct practical including viva-voce examination. The Chairman of the board will be the Head of the Department of Rehabilitation/Clinical Psychology who will also be an internal examiner. Theory examination will be held as per university guidelines.

MINIMUM FOR PASS

Candidate shall be declared to have passed the year-end final examination of Year-1 and 2, if **he/she obtains minimum 50% of the marks** (internal and external marks combined and average among the examiners) in:

1. Each of the theory papers
2. Each of the practical and viva-voce examinations
3. Each of the clinical placements
4. Each of the submissions
5. Research thesis (in case of Year-2)

➤ **Trainees securing 75% and above in aggregate shall be declared as “Distinction” and between 60 and 75% in aggregate as “I Class”.**

➤ Trainees who failed to pursue the course on continuous basis (irrespective the reasons) and those fails or absent from appearing in any of the exam of any year shall not be awarded the merit class (Distinction/I Class).

APPEARANCE FOR EACH EXAMINATION

- The final examination with external examiner/s as specified in each Program shall be held twice (Main examination and Supplementary examination) in an academic year/session with a minimum of 3 months interval between the examinations.
- The Main examination shall be held at the end of academic year/session, and the Supplementary examination shall be held at the mid of academic year/session, with an interval of minimum 3 months between the exams.
- A candidate shall appear for all the examinations when appearing for the first time; partial appearance is not allowed.
- A candidate failing in any course (theory/practical/research/clinical placement/ submission) has to reappear in that particular course whenever the examination is held next.
- A candidate will not be allowed to take the Year-2 examination unless he/she has passed the Year-1-examination.
- A candidate who has failed in Year-1 examination is allowed to continue the training of Year-2 and permitted to take the supplementary Year-1 examination.
- A candidate has to complete the course successfully and become eligible to award of the Degree within a period of two years, in, M. A. Clinical Psychology. Program, from the year of admission to the course.
- **No candidate shall be permitted to appear either of Year-1 & 2 examinations more than three times.**

INTERNAL ASSESSMENT

In each paper **30% marks** will be determined on the basis of theory/practical exams and viva-voce. These marks will be added to the marks allocated to the respective paper in the year-end examinations. The results of the final examinations will be declared on the basis of the **total (internal and external)** so obtained. The guidelines for allotting the internal marks may be prepared by the institution concerned.

SCHEME OF EXAMINATION

Part-I: (I Year)

Part I: (1 Year)						
Papers	Title	Paper Code	Duration	Marks		
				Final Assessment (Maximum)	Internal Assessment (Maximum)	Total
	Group “A”					
Paper I	Psychosocial Foundations of Behavior and Psychopathology	MACPSY 101	3hr.	70	30	100
Paper II	Psychiatry	MACPSY 102	3hr.	70	30	100
Paper III	Statistics and Research Methodology	MACPSY 103	3hr.	70	30	100
Practical: Psychological Assessments and Clinical Placement – I (Viva Voce)		MACPSY 104		70	30	100
	Group “B”					
Submission of five cases of full-length Psycho-diagnostics Report		MACPSY 105		None	100	100
TOTAL						500

Part-II-(II Year)

Papers	Title	Paper Code	Duration	Marks		
				Final Assessment (Maximum)	Internal Assessment (Maximum)	Total
Group “A”						
Paper I	Biological Determinants of Behavior and Neuropsychology	MACPSY 201	3hr.	70	30	100
Paper II	Behavioral Medicine	MACPSY 202	3hr.	70	30	100
Paper III	Psychotherapy and Counseling	MACPSY 203	3hr.	70	30	100
Practical: Psychological Therapy and Clinical Placement – II (Viva Voce)		MACPSY 204		140	60	200
Group “B”						
Submission of five cases of full-length Psychotherapy Report		MACPSY 205		None	100	100
Group “C”						
Research Thesis (Viva Voce)		MACPSY 206		70	30	100
TOTAL						700

Part-I (Year-I)

PAPER-I: Psychosocial Foundations of Behavior and Psychopathology

Aim:

The psychosocial perspectives attempt to understand human cognition, motives, perceptions and behavior as well as their aberrations as product of an interaction amongst societal, cultural, familial and religious factors. The overall aim is to introduce conceptualizations of mental health problems within the psychosocial framework, giving due considerations to contextual issues. Each unit in this paper pays attention to the different types of causal factors considered most influential in shaping both vulnerability to psychopathology and the form that pathology may take.

Course Objectives:

By the end of the course, trainees are required to demonstrate ability to:

- 1 Demonstrate a working knowledge of the theoretical application of the psychosocial model to various disorders.
- 2 Make distinctions between universal and culture-specific disorders paying attention to the different types of socio-cultural causal factors.
- 3 Demonstrate an awareness of the range of mental health problems with which clients can present to services, as well as their psychosocial/contextual mediation.
- 4 Carry out the clinical work up of clients with mental health problems and build psychosocial formulations and interventions, drawing on their knowledge of psychosocial models and their strengths and weaknesses.
- 5 Apply and integrate alternative or complementary theoretical

frameworks, for Example, biological and/or religious perspectives, sociocultural beliefs and practices etc. in overall management of mental health problems.

- 6 Describe, explain and apply current code of conduct and ethical principles that apply to clinical psychologists working in the area of mental health and illness.
- 7 Describe Mental Health Acts and Policies currently prevailing in the country and their implications in professional activities of clinical psychologists.

Course Outcomes:

Upon successful completion of this paper, students will be able to:

CO1: Demonstrate working knowledge of the psychosocial model and apply its theoretical principles to the understanding and management of various mental disorders.

CO2: Differentiate between universal and culture-specific disorders, analysing diverse socio-cultural causal factors influencing mental health.

CO3: Recognise the spectrum of mental health problems clients present with, and evaluate their psychosocial and contextual determinants.

CO4: Conduct comprehensive clinical assessments, develop psychosocial formulations, and design appropriate intervention plans informed by psychosocial models.

CO5: Integrate complementary theoretical perspectives—such as biological, religious, and sociocultural frameworks—into holistic management of mental health problems.

CO6: Describe, interpret, and adhere to the current code of conduct and ethical

principles governing clinical psychology practice in mental health settings.

CO7: Explain the prevailing Mental Health Acts and Policies in the country, and critically assess their implications for professional practice as a clinical psychologist.

Academic Format of Units:

Learning would be mainly through clinical workup of clients presenting with range of mental health problems, and supplemented by lectures, seminars and tutorials, allowing trainees to participate in collaborative discussions.

Evaluation:

Theory-involving long and short essays

SYLLABUS:

Part-A (Psychosocial Foundations of Behavior)

Unit - I: Introduction: Scope of clinical psychology; overview of the profession and practice; history and growth; professional role and functions; current issues and trends; areas of specialization; ethical and legal issues; code of conduct.

Unit - II: Mental health and illness: Mental health care – past and present; stigma and attitude towards mental illness; concept of mental health and illness; perspectives-psychodynamic, behavioral, cognitive, humanistic, existential and biological models of mental health/illness;

Unit-III: Epidemiology: Epidemiological studies in Indian context; socio-cultural correlates of mental illness, mental health, psychological well-being and quality of life.

Unit - IV: Self and relationships: Self-concept, self-image, self-perception and self-regulations in mental health and illness; learned helplessness and attribution theories; social skill model; interpersonal and communication models of mental illness; stress diathesis model, resilience, coping and social support.

Unit - V: Family influences: Early deprivation and trauma; neglect and abuse; attachment; separation. Inadequate parenting styles; marital discord and divorce; maladaptive peer relationships. Communication style; family burden; emotional adaptation; expressed emotions and relapses.

Unit-VI: Societal influences: Discrimination in race, gender and ethnicity; social class and structure, poverty and unemployment; prejudice, social change and uncertainty; crime and delinquency; social tension & violence; urban stressors; torture & terrorism; culture shock; migration; religion & gender related issues with reference to India.

Unit - VII: Disability: Definition and classification of disability; psychosocial models of disability; impact, needs and problems; issues related to assessment/certification of disability – areas and measures.

Unit - VIII: Rehabilitation: Approaches to rehabilitation; interventions in the rehabilitation processes; models of adaptation to disability; family and care givers issues; rights of mentally ill; Empowerment issues; support to recovery.

Unit - IX: Rights issue: Importance of UNCRPD; empowerment issues; rights of disabled; support/assistance from the Government through Policies and Acts (Mental Health Care Act, Persons with Disabilities Act, National Trust Act, RCI Act, Juvenile Justice Act, POCSO, NMHP etc.); ethical and legal issues in Psychology practice; contemporary challenges; ethics and professional code of conduct as outlined by RCI and APA.

Part-B (Psychopathology)

Unit - X: Introduction to psychopathology: Definition; concepts of normality and abnormality; clinical criteria of abnormality; continuity (dimensional) versus discontinuity (categorical), and Prototype models of psychopathology; classification and taxonomies – reliability and utility; Classificatory systems, currently in use and their advantages and limitations. Approach to Clinical interviewing and diagnosis; case history; mental status examination; organization and Presentation of psychiatric information; diagnostic formulation.

Unit XI: Psychological theories: Psychodynamic; behavioral; cognitive; humanistic; interpersonal; psychosocial; and other prominent theories/models of principal clinical disorders and problems, viz. anxiety, obsessive-compulsive, somatoform, dissociative, adjustment, sexual, substance use, personality, suicide, childhood and adolescence, psychotic, mood disorders, and culture-specific disorders.

Unit -XII: Indian thoughts: Concept of mental health and illness; nosology and taxonomy of mental illness; social identity and stratification (Varnashrama Vyavastha); concept of – cognition, emotion, personality, motivation and their disorders.

Psychiatry

Aim:

The aim is to train in conceptualization of psychopathology from different etiological perspectives, eliciting phenomenology and arrive at the clinical diagnosis following a classificatory system and propose/carry out psychological interventions including psychosocial treatment/management for the entire range of psychological disorders. Also, to train in assessing the caregivers' burden, disability and dysfunctions that are often associated with mental disorders and intervene as indicated in a given case.

Course Objectives:

By the end of the course, trainees are required to demonstrate ability to:

1. Demonstrate an understanding of a clinically significant behavioral and psychological syndrome, and differentiate between child and adult clinical features/presentation.
2. Understand that in many ways the culture, societal and familial practices shape the clinical presentation of mental disorders, and understand the role of developmental factors in adult psychopathology.
3. Carryout the clinical work up of clients presenting with a range of mental health problems and make clinical formulations/diagnosis drawing on their knowledge of a pertinent diagnostic criteria and phenomenology.
4. Summarize the psychosocial, biological and sociocultural causal factors associated with mental health problems and neuropsychological disorders with an emphasis on biopsychosocial and other systemic models.
5. Carryout with full competence the psychological assessment, selecting and using a variety of instruments in both children and adults.
6. Describe various intervention programs in terms of their efficacy and effectiveness with regard to
7. Short- and longer-term goals and demonstrate beginning competence in carrying out the indicated interventions, monitor progress and outcome.

8. Discuss various pharmacological agents that are used to treat common mental disorders and their mode of action.
9. Demonstrate an understanding of caregiver, and family burden and their coping style.
10. Assess the disability/dysfunctions that are associated with mental health problems, using appropriate measures
11. Discuss the medico-legal and ethical issues in patients requiring chronic care Institutionalization.

Course Outcomes:

Upon successful completion of this paper, students will be able to:

CO1. Exhibit knowledge of significant behavioural and psychological syndromes, with the ability to distinguish clinical characteristics in children versus adults.

CO2. Evaluate the impact of cultural, societal, familial, and developmental influences on how mental disorders present, especially in adulthood.

CO3. Perform thorough clinical evaluations for diverse mental health concerns, and develop informed diagnostic formulations based on recognised diagnostic systems and phenomenological understanding.

CO4. Analyse the multifactorial causes of mental health and neuropsychological conditions, integrating psychosocial, biological, and sociocultural perspectives within a biopsychosocial or systemic framework.

CO5. Competently administer psychological assessments using a range of tools suited to both child and adult populations.

CO6. Critically appraise various intervention strategies, assessing their relative effectiveness and suitability for different clinical goals and timeframes.

CO7. Demonstrate emerging proficiency in delivering targeted interventions,

while systematically tracking client progress and outcomes.

CO8. Explain the use, indications, and mechanisms of action of pharmacological treatments commonly prescribed for mental health conditions.

CO9. Assess caregiver and family stress related to mental illness, and understand the coping mechanisms families employ.

CO10. Evaluate functional impairments and disabilities associated with mental health disorders through the use of appropriate measurement tools.

CO11. Analyse ethical and legal considerations relevant to the management of patients requiring long-term institutional or custodial care.

Academic Format of Units:

Learning would be mainly through clinical workups of clients presenting with range of mental health problems, and supplemented by lectures, seminars and tutorials, allowing trainees to participate in collaborative discussion.

Evaluation: Theory – involving long and short essays, practical/clinical exam in psychological Assessment of psychiatric cases and comprehensive viva.

Syllabus:

Unit-I: Psychoses and neurotic disorders: Schizophrenia, affective disorders, delusional disorders and other forms of psychotic disorders; neurotic, stress related and somatoform disorders; types, clinical features, etiology and management of all the above.

Unit- II: Disorders of personality and behavior: Specific personality disorders; mental & behavioral disorders due to psychoactive substance use; habit and impulse disorders; sexual disorders and dysfunctions – types, clinical features, etiology and management.

Unit-III: Organic mental disorders: Dementia, delirium and other related conditions with neuralgic and systemic disorders – types, clinical features, etiology and management.

Unit-IV: Behavioral, emotional and developmental disorders/condition of childhood and adolescence including intellectual disability: types, clinical features, etiology and management.

Unit-V: Neurobiology of mental disorders and current therapeutics: Theories of psychosis, mood disorders, suicide, anxiety disorders, substance use disorders and other emotional and behavioral syndromes; Psychotropic drugs; ECT; psychosurgery, psychological therapies; rehabilitation strategies – half-way home, sheltered workshop, daycare, and institutionalization.

Unit-VI: Liaison psychiatry and subspecialties: Liaison in general hospital and primary care setting; specialties – social, geriatric, child, forensic, addiction and other branches

Statistics and Research Methods

Aim:

The advanced statistics course provides rigorous methodologies that are the foundation for leveraging big data and meaningful analytics in order to make better and faster decisions. The advanced course helps to analyze large amounts of clinical data to identify common patterns and trends for example, behavioral risks, treatment response, triggers of relapse or recurrence, multiple causative factors associated with a disorder etc., to convert them into meaningful information with large and important implications. The course is intended for graduate and doctoral students, requires familiarity with basic statistical concepts. Tutorials involve exposure to the features available in a large statistical package such as SPSS while reinforcing the concepts discussed in lectures and classroom discussion.

Course Objectives:

1. Use appropriate techniques draw meaningful conclusions from a random, raw and unstructured data.
2. Analyze a large database (available in public domain) and interpret output in a scientifically meaningful way.
3. Apply relevant design/statistical concepts in their own particular research projects.
4. Study the relationship between different variables or makes predictions for the whole population.
5. Demonstrate a clear understanding of the predictive statistical analysis that analyzes data to derive past trends and predict future events on the basis of them.
6. Become familiar with concepts like machine learning algorithms, data mining, data modelling, and artificial intelligence and clinical applications.
7. Understand the prescriptive analysis that conducts analysis of data and prescribes the best course of action based on the results that helps make

an informed decision.

8. Understand the causal statistical analysis that focuses on determining the cause-and-effect relationship between different variables within the raw data (determines why something happens and its effect on other variables).
9. Understand exploratory data analysis that involves exploring the unknown data associations (it analyzes the potential relationships within the data).
10. Critically review the literature to appreciate the theoretical and methodological issues involved.

Course Outcomes:

After completing this paper, students will be able to:

CO1. Employ suitable methods to extract and interpret patterns and insights from raw, unstructured datasets.

CO2. Examine extensive publicly available datasets and produce scientifically sound interpretations of the analysis results.

CO3. Integrate appropriate research design and statistical principles into their own research projects to ensure methodological rigor.

CO4. Investigate associations between variables and develop predictive models to generalise findings to larger populations.

CO5. Display a solid grasp of predictive analytics by identifying past data trends and using them to forecast future outcomes.

CO6. Gain foundational familiarity with advanced topics such as machine learning, data mining, modelling techniques, artificial intelligence, and their clinical applications.

CO7. Explain and apply prescriptive analytics approaches to recommend optimal actions based on analytical results for informed decision-making.

CO8. Analyse causal relationships within data to understand how specific variables influence outcomes and the mechanisms underlying these effects.

CO9. Conduct exploratory analyses to uncover previously unknown patterns and relationships within complex datasets.

CO10. Critically evaluate academic literature to identify and understand key theoretical frameworks and methodological challenges in research.

Academic Format of Units:

The course will be taught mainly in a mixed lecture/tutorial format, Allowing trainees to participate in collaborative discussions. Demonstration and hands-on experience with SPSS program are desired activities.

Evaluation: Theory - involving long and short essays, and problem-solving exercises

Syllabus:

Unit-I: Introduction: A review of core concepts - hypothesis testing (level of significance, sample size estimation, power and efficiency, standard errors, CI for proportions and probabilities); sampling methods and minimizing errors; experimental designs (pre-experimental, true- experimental, quasi experimental, statistical); level of measurement of a variable (various scales); establishing reliability, validity and norms; tests of significance – parametric and nonparametric tests

Unit-II: Epidemiological studies: Rates, prevalence and incidence; types- prospective and retrospective studies; diagnostic efficiency statistics (sensitivity, specificity, predictive values); risk estimation - measure of risk and differential risk, odds ratio and survival analysis.

Unit-III: Analysis of variance: Variations and models – fixed effects models,

random effects models, mixed effects models, post hoc analysis (range and non-range tests), types of ANOVA – one-way, factorial, repeated measures, multivariate analysis and ANCOVA, MANCOVA, multiway ANOVA and linear regression

Unit-IV: Multivariate analysis: Introduction, multiple regression, logistic regression, PLS regression, OLS regression, penalized regression, phylogenetic regression, discriminant function analysis, path analysis, factor analysis, cluster analysis, survival analysis, MANOVA, canonical correlation, and multidimensional scaling, PCA to detect pattern in variables

Unit-V: Qualitative research: Qualitative methods of psychosocial research, method of analysis (content, thematic, narrative, grounded theory, discourse analysis), stages of data analysis (familiarization, identifying thematic framework, indexing, charting, mapping and interpreting), grounded theory – method and practice

Unit-VI: AI – Introduction, machine learning, neural network to make predictions and application of R software, and hands-on experience in use of statistical package in the field of behavioral science such as SPSS, SAS, Stat graphics

References:

Textbooks – None; reading will be from the primary literature (Journal articles and book chapters).

Psychological Assessments (Practical)

Aim:

To provide hands on experience in acquiring the necessary skills and competency in selecting, administering, scoring and interpreting psychological tests often employed in clients with mental or neuropsychological disorders. Since psychological assessment involves integration of information from multiple sources, the trainees are required to be given extensive exposure in working up of cases and carrying out the assessment at all levels. Typical areas of focus for psychological assessment includes (not necessarily limited to): cognition, intelligence, personality, diagnostic, levels of adjustment, disability/functional capacity, neuropsychological functions, clinical ratings of symptomatology, variables that help/direct treatment, and assess treatment outcomes.

Course Objectives:

By the end of Year-I, trainees are required to demonstrate ability to:

1. Use relevant criteria to assess the quality and appropriateness of a psychological test and evaluate its strengths and weaknesses for clinical purposes.
2. Able to carry out the clinical work up and discuss the diagnostic possibilities based on the history and mental status examination of the clients with psychological/neuropsychological problems.
3. Synthesize and integrate collateral information from multiple sources and discuss the rationale for psychological assessment as relevant to the areas being assessed.
4. Select and justify the use of psychological tests and carry out the assessment as per the specified procedures in investigating the relevant domains.
5. Interpret the findings in the backdrop of the clinical history and mental status findings and arrive at a diagnosis.

6. Prepare the report of the findings as relevant to the clinical questions asked or hypothesis setup before the testing began and integrate the findings in service activities.

Course Outcomes:

After completing this paper, students will be able to:

CO1. Critically analyze psychological tests, identifying their clinical strengths and limitations in various diagnostic and therapeutic contexts.

CO2. Conduct comprehensive clinical evaluations using client history and mental status examinations to explore and differentiate potential psychological and neuropsychological diagnoses.

CO3. Gather and integrate information from diverse sources, demonstrating the ability to justify the need for psychological assessments relevant to specific clinical concerns.

CO4. Select appropriate psychological assessment tools and implement standardized procedures to evaluate cognitive, emotional, and behavioral domains.

CO5. Interpret psychological test results in relation to clinical background information, synthesizing findings to support accurate diagnostic conclusions.

CO6. Compile detailed psychological reports, effectively connecting test outcomes with initial clinical questions or hypotheses and applying results to therapeutic or service-related interventions

Academic Format of Units:

Acquiring the required competency/skills would be primarily through clinical workups of cases having psychological/neuropsychological disorders and carrying out the indicated psychological assessments within the clinical context. Demonstration and tutorials shall be held for imparting

practical/theory components of the psychological tests.

Evaluation:

Practical/clinical– involve working up cases and carrying out the psychological assessment within clinical context and viva-voce.

Syllabus:

Unit-I: Introduction: Case history; mental status examination; rationale of psychological assessment; behavioral observations, response recording, and syntheses of information from different sources; formats of report writing.

Unit-II: Tests of cognitive functions and for PwD: Bender gestalt test; Wechsler memory scale; PGI memory scale; Wilcoxon cord sorting test, Bhatia's battery of performance tests of intelligence; Binet's test of intelligence (locally standardized); Raven's progressive matrices (all versions); Wechsler adult intelligence scale–Indian adaptation (WAPIS, WAIS-R); Tests for PwD-WAIS-R, WISC-R (for visual handicapped), blind Learning Aptitude test, and other interest and aptitude tests, Kauffman's assessment battery and such other tests/scales for physically handicapped individuals.

Unit-III: Tests for diagnostic clarification: A) Rorschach psycho diagnostics, B) Tests for thought disorders–color form sorting test, object sorting test, proverb test, C) Minnesota multi phasic personality inventory; multiphasic questionnaire, clinical analysis questionnaire, IPDE, D) screening instruments such as GHQ, hospital anxiety/depression scale etc. to detect psychopathology.

Unit-IV: Tests for adjustment and personality assessment: A) Questionnaires and inventories– 16personalityfactorquestionnaire, NEO-5personalityinventory, temperament and character inventory, Eysenck's personality inventory, Eysenck's personality questionnaire, self-concept and self-esteem scales,

Rottor's locus of control scale, Bell's adjustment inventory(students' and adults'), subjective well-being questionnaires, QOL , B) projective tests – sentence completion test, picture frustration test, draw-a-person test; TAT–Murray's and Uma Chowdhary's.

Unit-V: Rating scales: Self-rated and observer-rated scales of different clinical conditions such as anxiety, depression, mania, OCD, phobia, panic disorder etc. (including Leyton's obsessional inventory, Y-BOCS, BDI, STAI, HADS, HARS, SANS, SAPS, PANSS, BPRS), issues related to clinical applications and recent developments.

Unit-VI: Psychological assessment of children: A) Developmental psycho pathology check list, CBCL, B) Administration, scoring and interpretation of tests of intelligence scale for children such as SFB,C-RPM, Malin's WISC, Binet's tests, and developmental schedules (Gesell's, Illingworth's and other) Vineland social maturity scale, AMD adaptation scale for mental retardation, BASIC-MR, developmental screening test (Bharat raj's), C)Tests of scholastic abilities, tests of attention, reading, writing, arithmetic, visuo-motor gestalt, and integration, D) Projective tests– Raven's controlled projection test, draw-a-person test, children's apperception test, E) Clinical rating scales such as for autism, ADHD etc.

Unit-VII: Neuropsychological assessment: LNNB, Halstead Reiten battery, PGI-BBD, NIMHANS and other batteries of neuropsychological tests in current use.

Core Tests:

1. Stanford Binet's test of intelligence (any vernacular version)
2. Raven's test of intelligence (all forms)
3. Bhatia's battery of intelligence tests
4. Wechsler adult performance intelligence scale

5. Malin's intelligence scale for children
6. Gesell's developmental schedule
7. Wechsler memory scale
8. PGI memory scale
9. 16 personality factor
10. NEO-5 personality inventory
11. Temperament and character inventory
12. Children personality questionnaire
13. Clinical analysis questionnaire
14. Multiphasic questionnaire
15. Object sorting/classification test
16. Sentence completion test
17. Thematic apperception test
18. Children' apperception test
19. Rorschach psycho diagnostics
20. Personality assessment inventory
21. Neuropsychological battery of tests (any standard version)

A certificate by the head of the department that the candidate has attained the required competence in all of the above tests shall be necessary for appearing in the university examinations of Year –I. However, if the center opts to test and certify the competency in neuropsychological tests as part of the requirements for appearing in the university examinations of Part II (i.e., excluding it from Part I), it could be done so. In such case, the Practical/Clinical examinations of Part-II shall include an examination in this area, in addition to examination in Psychological Therapies.

Clinical Placement – 1

Clinical Placement – 1 for the 1st year begins from the date of enrollment into the program and concludes at the end of the first year. The placement is designed to provide hands-on experience and learning in a clinical setting,

allowing students to apply theoretical knowledge to clinical population. At the end of the year, students will undergo an internal evaluation and a Viva Voce

Aim:

The overall goal of the placement is to develop psychology professionals competent to practice patient care independently acquiring interviewing and assessment skills, developing rapport with patients, performing all aspects of an evaluation, including eliciting a clear and accurate history, performing mental status examinations, formulating a diagnosis, and carrying out appropriate diagnostic and psychological tests to clarify the diagnosis and to facilitate development of interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families and health professionals.

Course Objectives:

1. Expected to acquire skills of eliciting the relevant clinical history through a psychiatric interview of the clients and his/her caregivers; being sensitive to cultural diversity and religious and education background of the client/family.
2. Expected to conduct a thorough mental status examination and propose relevant differential diagnosis using latest ICD diagnostic criteria. Based on clinical findings, trainees select appropriate psychological tests/measures and conduct Psychological Evaluation to answer relevant clinical questions.
3. Expected to seek and seize all opportunities in IP and OP settings and in specialty clinics to get exposure and evaluate a wide variety of psychiatric disorders of Child, Adolescents, Adults and special Populations.
4. Demonstrate a comprehensive knowledge of various classes of psychotropic medications, clinical indications, and their side-effects.

5.Expected to have a reasonable understanding of Pharmacological basis of the mechanism of action and interaction of drugs commonly used in the treatment of psychological disorders, and hypothesized biological mediators of psychological interventions as the knowledge in these areas is considered essential to offer an effective psychoeducation as part of psychological interventions.

Course Outcomes:

CO1. Demonstrate proficiency in conducting culturally sensitive psychiatric interviews, effectively gathering comprehensive clinical histories from clients and caregivers, with attention to individual cultural, religious, and educational backgrounds.

CO2. Perform detailed mental status examinations and apply the current ICD diagnostic criteria to identify differential diagnoses; select and administer appropriate psychological assessments based on clinical indications.

CO3. Actively engage in inpatient, outpatient, and specialty clinic settings to gain practical experience in assessing a broad spectrum of psychiatric conditions across different age groups and special populations.

CO4. Exhibit in-depth knowledge of psychotropic drug categories, including their clinical uses and potential side effects, to support integrated clinical decision-making.

CO4. Develop a sound understanding of psychopharmacology, including drug mechanisms, interactions, and biological underpinnings of psychological treatments, to enhance the quality of psychoeducation and intervention strategies provided to clients.

Evaluation:

The evaluation shall be conducted by faculty members providing clinical supervision and would include the level of mastery acquired for by giving short and long cases for examination and evaluation.

- A. Working up of a case and presenting the case history with detailed MSE
- B. Formulating the case and discussing differential diagnosis
- C. Conduct of appropriate Psycho-diagnostic assessment and reporting the findings (both oral and written format)
- D. Discussing the possible short and long-term interventions
- E. Prognosticating the case

Psycho-diagnostic Records Submission

Guidelines for Submitting Full-length Psycho-diagnostic Records:

Trainees are required to submit a total of five records, with one record each focusing on **child therapy** and **neuropsychological assessment**. These records should be printed with double line spacing and bound together in a single format. The following information must be displayed on the opening page of each record: the registration number at the center, the date the patient was first seen, the supervising consultant's name, and their signature. Additionally, the relevant test protocols should be submitted separately in a file. The records, endorsed by the supervisor, should include a summary of the clinical history and must be organized under the following headings:

1. Socio-demographic data
2. Presenting complaints
3. History of present illness
4. History of past illness (if any)
5. Family history
6. Personal history

7. Pre-morbid personality
8. Relevant findings on physical examination
9. Findings on Mental Status Examination
10. Diagnostic formulation
11. Differential diagnosis
12. Sociocultural and contextual factors
13. Short- and long-term management Should include a discussion (in detail) on the:
 - A. Rationale for psychological testing
 - B. Area/s to be investigated
 - C. Tests administered (mention full title of the tests/scales etc.) and rationale for their use
 - D. Behavioral observations during testing and overall validity of the test results
 - E. Test findings and their interpretations
 - F. Impression

A summary of the test results and the management plan (including suggestion/s if any) should be incorporated at the end of each record.

Part-II (Year-11)

Biological Determinants of Behavior and Neuropsychology

Aim:

Brain disorders cause symptoms that look remarkably like other functional psychological disorders. Learning how brain is involved in the genesis of normal and abnormal behavioral/emotional manifestation would result in better clinical judgment, lesser diagnostic errors and increase sensitivity to consider and rule out a neuropsychological origin or biochemical mediation of the psychopathology. Also, current researches have indicated many pharmacological agents dramatically alter the severity and course of certain mental disorders, particularly more severe disorders. Therefore, the aim of this course is to provide important biological foundations of human behavior and various syndromes. The main focus is the nervous system and its command center - the brain.

Course Objectives:

1. Describe the nature and basic functions of the nervous system
2. Explain what neurons are and how they process information
3. Identify the brain's levels and structures, and summarize functions of the structures
4. Describe the biochemical aspects of the brain and how genetics increase our understanding of behavior.
5. State what the endocrine system is and how it regulates the internal environment and affects behavior.
6. Discuss the principles of psychopharmacology and review the general role of neurotransmitters and neuromodulators in the brain.
7. Describe the monoaminergic and cholinergic pathway in the brain and the drugs that affect these neurons.
8. Describe the role of neurons that release amino acid neurotransmitters and the drugs that affect these neurons.

Course Outcomes:

CO1. Demonstrate an understanding of the structure and core functions of the nervous system, including its role in coordinating behavior and physiological processes.

CO2. Explain the structure and function of neurons, including how they receive, process, and transmit information within the nervous system.

CO3. Identify major brain structures and hierarchical levels, and summarize the functional roles of each region in regulating behavior and cognition.

CO4. Analyze the brain's biochemical processes, and evaluate the influence of genetic factors on behavior and brain function.

CO5. Describe the structure and role of the endocrine system, and explain how it contributes to the regulation of bodily functions and behavioral responses.

CO6. Apply foundational principles of psychopharmacology to understand how neurotransmitters and neuromodulators influence brain activity and behavior.

CO7. Describe the anatomy and function of monoaminergic and cholinergic pathways, and examine how specific drugs interact with these neural systems.

CO8. Discuss the role of amino acid neurotransmitters in the brain, and evaluate how pharmacological agents impact neurons that utilize these transmitters.

Academic Format of Units:

Lectures, seminars and demonstrations by the experts in specific discipline, disease, topics such as by Anatomist, Biochemist, Physiologist, Psychiatrist, Neurologist and Neurosurgeons are required to impart knowledge and skills in

certain domains. Depending on the resources available at the center these academic activities can be arranged.

Evaluation: Involving long and short essays and viva

Syllabus:

Unit-I: Anatomical sub-divisions of the human brain; the surface anatomy and interior structures of cortical and sub-cortical regions; anatomical connectivity among the various regions; blood supply to brain and the CSF system; cyto architecture and modular organization in the brain; Communication within (membrane potential, action potential) and between neurons (neurotransmitters, neuromodulators and hormones).

Unit-II: Biochemistry of the brain: Biochemical and metabolic aspects of brain; medical genetics; structure and function of chromosomes; molecular methods in genetics; single-gene inheritance; cytogenetic abnormalities; multifactorial inheritance; biochemistry of genetic diseases

Unit-III: Neurobiology of sensory-motor systems: Organization of sensory-motor system in terms of receptors, relay neurons, thalamus and cortical processing of different sensations; principle motor mechanisms of the periphery (muscle spindle), thalamus, basal ganglia, brain stem, cerebellum and cerebral cortex; neurobiology of drives, motivation, hunger, thirst, sex, learning, memory, emotion, and personality, regulation of internal environment: role of limbic, autonomic and the neuroendocrine system in regulating the internal environment; reticular formation and other important neural substrates regulating the state of sleep/wakefulness

Unit-IV: Psychopharmacology: Principles of psychopharmacology, sites of drug action (effects on production, storage, release, receptors, reuptake and destruction); drugs commonly used to treat psychiatric disorders and putative mechanisms of action, role of neurotransmitters and Neuro modulators

(acetylcholine, monoamines (DA, NE and 5-HT), amino acids, peptides, lipids) in various aspects of behavior; neurobiology of mental disorders - neurochemical, metabolic and genetic aspect of major mental disorders, neurodevelopmental and behavioral disorders;

Part-B: Clinical Neuropsychology

Aim:

The course aims to provide an understanding of the relationships between the brain and cognition, affect and behavior across developmental stages through clinical evaluation and follow-up of a variety of cases with brain disease and injury.

Course Objectives:

1. Discuss at ease the functional aspects of different brain networks, and can explain how these would affect an individual in daily life situations and make recommendations for interventions and social rehabilitation in affected cases.
2. Describe what kinds of neuropsychological deficits are often associated with lesions of frontal, parietal, temporal and occipital lobes of the brain, and carry out the indicated neuropsychological assessment employing any valid battery of tests.
3. Describe what kinds of neuropsychological deficits are often associated with subcortical lesions of the brain.
4. List symptoms those are typical of focal and diffuse brain damage.
5. Enumerate the characteristics of clinical syndrome and the nature of neuropsychological deficits seen in various cortical and subcortical dementias.
6. Describe the neuropsychological profile of principal psychiatric syndromes.
7. Demonstrate an understanding of functional neuro-imaging techniques and their application in psychological disorders and cognitive neuroscience.
8. Demonstrate an understanding of the principles involved in neuropsychological assessment, its strengths and weaknesses, and indications.

9. Describe the nature of disability associated with head injury in the short and longer term, methods of remedial training and their strengths and weakness.

Course Outcomes:

CO1. Brain Network Functioning and Daily Life Applications: Students will demonstrate a comprehensive understanding of the functional roles of major brain networks (e.g., default mode, salience, executive control) and evaluate their influence on behavior and cognition in real-life contexts. They will be able to design intervention strategies and recommend social rehabilitation plans for individuals with disrupted neural networks.

CO2. Lobe-Specific Deficits and Neuropsychological Testing: Students will be able to identify and explain the neuropsychological consequences of damage to the frontal, parietal, temporal, and occipital lobes. They will competently administer and interpret results from standardized neuropsychological test batteries suitable for assessing lobe-specific cognitive functions.

CO3. Subcortical Lesion-Related Deficits: Students will describe the cognitive, emotional, and motor impairments that typically result from subcortical brain lesions, such as those involving the basal ganglia, thalamus, or white matter tracts, and explain their relevance in clinical neuropsychology.

CO4. Symptoms of Focal vs. Diffuse Brain Damage: Students will distinguish between focal and diffuse brain injuries, accurately listing the associated symptomatology, and interpret how these presentations impact cognitive and behavioral functioning in affected individuals.

CO5. Dementias: Cortical and Subcortical: Students will analyze the clinical features and neuropsychological patterns observed in cortical dementias (e.g., Alzheimer's disease) and subcortical dementias (e.g., Parkinson's, Huntington's), demonstrating an understanding of the underlying pathology

and progression of cognitive decline.

CO6. Psychiatric Syndromes and Cognitive Profiles: Students will be able to describe the neuropsychological profiles associated with major psychiatric conditions, such as schizophrenia, depression, bipolar disorder, and anxiety, and evaluate how cognitive impairments interact with symptom severity and treatment outcomes.

CO7. Neuroimaging in Clinical and Research Contexts: Students will demonstrate a clear understanding of various functional neuroimaging modalities (e.g., fMRI, PET, SPECT), and articulate their applications in the assessment of psychological disorders and the study of cognitive functions in neuroscience research.

CO8. Principles and Practice of Neuropsychological Assessment: Students will demonstrate knowledge of the fundamental principles guiding neuropsychological assessment, evaluate the utility and limitations of various tools and methods, and determine appropriate contexts for their clinical application.

CO9. Head Injury: Disability and Rehabilitation: Students will describe the cognitive, emotional, and behavioral consequences of traumatic brain injury in both acute and chronic phases. They will evaluate different rehabilitation techniques, discuss their efficacy, and identify appropriate remedial training based on the severity and nature of the deficits.

Academic Format of Units:

The learning would be primarily through clinical assessment of cases with brain lesions and disorders, and supplemented by lectures, seminars and tutorials, allowing trainees to participate in collaborative discussion.

Evaluation:

Practical/clinical exam in neuropsychological assessment with cases having a brain lesion/disorder and theory aspects by long and short essays, and comprehensive viva.

Syllabus:

Unit-I: Introduction: Relationship between structure and function of the brain; the rise of neuropsychology as a distinct discipline, logic of cerebral organization; localization and Lateralization of functions; approaches and methodologies of clinical and cognitive neuropsychologists.

Unit-II: Frontal and temporal lobe syndrome: Frontal lobe - disturbances of regulatory functions; attentional processes; emotions; memory and intellectual activity; language and motor functions; temporal lobe - special senses, hearing, vestibular functions and integrative functions; disturbances in learning and memory functions; language, emotions, time perception and consciousness.

Unit-III: Parietal and occipital lobe syndromes: Parietal lobe - disturbances in sensory functions and Body schema perception; agnosia's and apraxia's; occipital lobe - disturbances in visual space Perception; color perception; writing and reading ability.

Unit-IV: Neuropsychological assessment: Principles, approaches, scope and indications and issues involved in neuropsychological assessment of children, functional domains in children; Categorization of major brain functions, localization of functions in the brain, content of Empirically validated batteries such as LNNB, Halstead-Reitan battery, PGI-BBD, NIMHANS and other batteries of neuropsychological tests in current use and their application, Neuropsychological profile: Neuropsychological profile of cortical and subcortical dementia; major mental disorders, substance use disorders,

neurodevelopmental disorders

Unit-V: Neuropsychological rehabilitation: Principles, objectives and methods of neuro- rehabilitation of traumatic brain injury, organic brain disorders, major psychiatric disorders and behavioural disorders; scope of computer-based retraining, neuro feedback, cognitive aids; application of functional human brain mapping techniques such as QEEG, EP & ERP, PET, SPECT, fMRI etc.

Behavioral Medicine

Aim:

Health psychology, as one of the subspecialties of applied psychology, has made a notable impact on almost the entire range of clinical medicine. The field deals with psychological theories and methods that contribute immensely to the understanding and appreciation of health behavior, psychosocial and cultural factors influencing the development, adjustment to, treatment, outcome and prevention of psychological components of medical problems. The aim of behavioral medicine is to elucidate the effects of stress on immune, endocrine, and neurotransmitter functions among others, psychological process involved in health choices individuals make and adherence to preventive regimens, the effectiveness of psychological interventions in altering unhealthy lifestyles and in directly reducing illness related to various systems. Further, to provide the

required skills and competency to assess and intervene for psychological factors that may predispose an individual to physical illness and that maintain symptoms, in methods of mitigating the negative effects of stressful situations/events, and buffering personal resources.

Objectives:

On completion of the course, trainees are required to demonstrate ability to:

1. Appreciate the impact of psychological factors on developing and surviving a systemic illness.
2. Understand the psychosocial impact of an illness and psychological interventions used in this context.
3. Understand the psychosocial outcomes of disease, psychosocial interventions employed to alter the unfavorable outcomes.
4. Understand the rationale of psychological interventions and their relative efficacy in chronic disease, and carry out the indicated interventions.
5. Understand the importance of physician-patient relationships and communication in determining health outcomes.
6. Understand how basic principles of health psychology are applied in specific context of various health problems and apply them with competence.
7. Demonstrate the required sensitivity to issues of death and dying, breaking bad news, and end- of-life issues.
8. Carry out specialized interventions during period of crisis, grief and bereavement.
9. Understand, assimilate, apply and integrate newer evidence-based research findings in therapies, techniques and processes.
10. Critically evaluate current health psychology/behavioral medicine research articles, and present improved design/methods of replicating such research.
11. Demonstrate the sense responsibility while working collaboratively with another specialist and foster a working alliance.

Course Outcomes:

CO1. Students will recognize how psychological factors influence the onset, course, and recovery from systemic illnesses.

CO2. Students will understand how illness affects mental and social well-being and identify psychological strategies to support affected individuals.

CO3. Students will evaluate how psychosocial approaches can improve negative outcomes related to physical illness.

CO4. Students will explain and implement psychological treatments for chronic conditions, based on their effectiveness and relevance.

CO5. Students will understand the role of doctor-patient relationships and communication in promoting better health outcomes.

CO6. Students will apply foundational health psychology concepts in managing diverse health conditions with professional competence.

CO7. Students will demonstrate compassion and skill in addressing death, terminal illness, and breaking difficult news.

CO8. Students will provide targeted psychological interventions during periods of crisis, loss, and mourning.

CO9. Students will integrate recent research findings into clinical practice to enhance therapeutic effectiveness.

CO10. Students will critically assess behavioral medicine literature and suggest improved research designs or methodologies.

CO11. Students will show accountability and cooperation in working with other professionals, promoting effective teamwork and care delivery.

Academic Format of Units:

Competency/skills are imparted through supervised workups, assessment and practical work of carrying out various treatment techniques within clinical context. Depending on availability of resources at the parent center, the trainees may be posted for extra-institutional learning. Demonstration, clinical issue seminar, clinical seminar, clinical case conferences are required to impart the necessary knowledge and skills.

Evaluation: **Theory** - involving long and short essays, and practical/clinical - involving workup and assessment of clinical cases with viva voce.

Syllabus:

Unit-I: Introduction: Psycho-behavioral influence on neuroendocrine, neurotransmitter and neuro-immune responses to stress, negative affectivity, behavioral patterns, and coping styles, psychophysiological models of disease, theoretical models of health behavior, scope and application of psychological principles in health and illness; research and developments in health psychology, psychophysiology, psychoneuroimmunology, psychobiology, socio biology and their implications; demonstrated effects of psychological interventions on the biology of brain and Implications.

Unit-II: Central nervous system: Cognitive, behavioral, emotional disturbances in major CNS diseases like cerebrovascular (stroke, vascular dementia etc.), developmental (cerebral palsy), degenerative (Parkinson's etc.), trauma (traumatic brain and spinal cord injury), convulsive (epilepsy), and infectious (AIDS dementia), psychological assessment, intervention and rehabilitation of this population.

Unit-III: Cardiovascular system: Psychosocial, personality, lifestyle, and

health practice issues, psycho-behavioral responses including coping with illness and functional loss in hypertension, MI, following CABG and other cardiovascular conditions, salient issues with regard to quality-of life and well-being, empirically proven methods of psychological management of CVS diseases.

Unit-IV: Respiratory system: precipitants, such as emotional arousal, and other external stimuli, exacerbates such as anxiety and panic symptoms, effects, such as secondary gain, low self- esteem in asthma and other airway diseases, psychological, behavioral and biofeedback strategies as adjunct in the management.

Unit-V: Genitourinary/renal/reproductive system: Psychosocial issues in male/female sexual dysfunctions, micturition/voiding problems including primary/secondary enuresis, end-stage renal disease, dialysis treatment, primary and secondary infertility, empirically validated psychological and behavioral interventions in these conditions.

Unit-VI: Gastrointestinal system and Dermatology: Evaluation of psychological factors including personality characteristics and stress/coping style in functional GI disorders (such as irritable bowel syndrome, inflammatory bowel disease, peptic ulcer disease, esophageal disorder etc.); role of stress and anxiety in psycho-dermatological conditions (such as psoriasis, chronic urticarial, dermatitis, alopecia etc.); impact of these on self-esteem, body image and mood, role of psychological interventions such as relaxation, stress management, counseling, cognitive restructuring and biofeedback strategies.

Unit-VII: Oncology and Pain: Psychosocial issues associated with cancer - quality of life, denial, grief reaction to bodily changes, fear of treatment, abandonment, side effects, recurrence, resilience; physiological and psychological processes involved in pain experience and behavior, assessment

tools for acute and chronic pain intensity, behavior, and dysfunctions/disability related to pain, psychological interventions such as cognitive, behavioral, biofeedback and hypnotic therapies.

Psychotherapy and Counseling

Aim:

Impart knowledge and skills necessary to carry out psychological interventions in mental health problems with required competency. As a prelude to problem-based learning within a clinical context, the trainees are introduced to factors that lead to development of an effective working therapeutic alliance, pre-treatment assessment, setting therapy goals, evaluation of success of therapy in producing desired changes, and variables that affect the therapy processes. Further, the aim is to equip the trainees with various theories of clinical problems, and intervention techniques, and their advantages and limitations.

Course Objectives:

1. Describe what factors are important in determining how well patients do in psychotherapy?
2. Demonstrate an ability to provide a clear, coherent, and succinct account of patient's problems and to develop an appropriate treatment plan.
3. Demonstrate a sense of working collaboratively on the problem and ability to foster an effective alliance.
4. Demonstrate a working knowledge of theoretical application of various approaches of therapy to clinical conditions.
5. Set realistic goals for intervention taking into consideration the social and contextual mediation.
6. Carry out specialized assessments and interventions, drawing on their knowledge of pertinent Outcome/evidence research.
7. Use appropriate measures of quantifying changes and, apply and integrate alternative or Complementary theoretical approach, depending

on the intervention outcome.

8. Demonstrate skills in presenting and communicating some aspects of current intervention work for assessment by other health professionals, give and receive constructive feedback.

9. Demonstrate ability to link theory-practice and assimilate clinical, professional, academic and ethical knowledge in their role of a therapist.

10. Present a critical analysis of intervention related research articles and propose their own Methods/design of replicating such research.

Course Outcomes:

CO1. Students will identify key elements that influence therapeutic outcomes, including client, therapist, and contextual factors.

CO2. Students will develop clear and structured case summaries and formulate appropriate, goal-oriented treatment plans.

CO3. Students will demonstrate the ability to engage clients collaboratively and maintain a strong therapeutic relationship.

CO4. Students will apply major therapeutic frameworks to real clinical issues with theoretical and practical understanding.

CO5. Students will create realistic and context-sensitive therapeutic goals, considering social and environmental influences.

CO6. Students will perform specialized clinical evaluations and interventions based on evidence-informed practices.

CO7. Students will measure treatment progress using suitable tools and modify strategies by integrating alternative approaches as needed.

CO8. Students will effectively present their clinical work to peers or supervisors, and participate in giving and receiving professional feedback.

CO9. Students will connect theoretical knowledge with clinical application, integrating ethical, professional, and academic insights in therapeutic roles.

CO10. Students will analyze intervention research critically and propose innovative methods for research replication and improvement.

Academic Format of Units: Acquiring the required competency/skills would be primarily through clinical workups and carrying out of various treatment techniques, under supervision, within clinical context. The trainees are required to be involved in all clinical service activities – institutional or community based, of the center. Demonstration, clinical issue seminar, clinical seminar, clinical case conferences are required to be planned to impart the necessary knowledge and skills.

Evaluation:

Theory - involving long and short essays, and practical/clinical - involving workup and assessment of clinical cases with viva voce.

Syllabus:

Unit-I: Introduction: Issues related to training therapists; ethical and legal issues; rights and responsibilities; consent/assent issues; planning and recording of therapy sessions; structuring and setting goals; factors influencing the therapeutic relationship; pre- and post-assessment; practice of evidence-based therapies; managed care.

Unit-II: Affective psychotherapies: Historical aspects and empirical status of psychodynamic, brief, humanistic, existential, gestalt, person-centered, Adlerian, transactional analysis, reality therapy, supportive, clinical

hypnotherapy, play therapy, psychodrama, and oriental approaches such as yoga, meditation, shavasana, pranic healing, reiki, tai chi etc.

Unit-III: Behavior therapies: Indications and empirical status of behavioral techniques such as desensitization (imaginal, in-vivo, enriched, assisted); extinction (graded exposure, flooding and response prevention, implosion, covert extinction, negative practice, stimulus satiation); skill training (assertiveness training, modeling, behavioral rehearsal), operant procedures (token economy, contingency management); aversion (faradic aversion therapy, covert sensitization, aversion relief procedure, anxiety relief procedure and avoidance conditioning); self-control procedures (thought stop, paradoxical intention, stimulus satiation); biofeedback (EMG, GSR, EEG, Temp., EKG); behavioral counseling, Group behavioral approaches, behavioral family/marital therapies.

Unit-IV: Cognitive therapies: Indications and empirical status of rational emotive behavior therapy, cognitive behavior therapy, cognitive analytic therapy, dialectical behavior therapy, problem-solving therapy, mindfulness based cognitive therapy, schema focused therapy, cognitive restructuring, and other principal models of cognitive therapies, trans diagnostic cognitive behavior therapies.

Unit-V: Systemic and Physiological therapies: Indications, and empirical status of family therapy, marital therapy, group therapy, sex therapy, interpersonal therapy; progressive muscular relaxation, autogenic training, biofeedback, eye-movement desensitization and reprocessing and other major therapies.

Unit-VI: Counseling and Psychoeducation: Behavioral, cognitive and humanistic approaches; counseling process; theory and procedures to specific domains of counseling; models of therapeutic education, family counseling for

a collaborative effort towards recovery, relapse- prevention and successful rehabilitation with regard to various debilitating mental disorders.

Unit-VII: Psychotherapy research: Defining and estimating treatment effects, comparators issues, RCTs, causality in therapy research, biases and allegiance, common factors, specific effects, studying mechanisms, mediation and moderators, mediation analysis, non-inferiority and equivalence tests, identifying responders and moderators, therapist effect, design effect, nested and crossed designs, qualitative methods in understanding the causation, process-based therapy, client preference in therapy work and its implications, ethical issues in psychotherapy research

Clinical Placement – 2

Part – A is first-half of the academic Year - 2, starting from the beginning of the academic session. During the placement, trainees continue to focus on development of knowledge and skills further for complex and long-term psycho therapeutic interventions that are empirically supported and as per best practice guidelines. At this level of training, students understand the pros and cons of evidence-based and evidence- informed practice and consider individual variables of their clients and engage them in shared decision-making. This facilitates acquiring most valuable clinical skills to perform empirically supported treatments also helps developing a cogent rationale for intervention strategies. Trainees focus and gain hands-on experience in offering therapies and techniques in special conditions where integrative/eclectic approach is the basis of clinical intervention. Undertake self-study supplementing didactic lectures on the methodology related to RCTs, qualitative research, public ethnographic research, process-outcome studies and meta-analysis and the process involved in scientific reporting of the experimental and qualitative findings. Trainees have opportunities to work with a wide range of theoretical orientations (including interpersonal, cognitive- behavioral, existential, humanistic, psychodynamic, multicultural, feminist, ACT, DBT, SFT, Trans diagnostic, trauma-focus CBT, EMDR and so on) and areas of specialization (such as gender issues, LGBTQA, disordered eating, sexual and relationship violence, suicide prevention, PTSD, career development, and crisis intervention) in a variety of multicultural settings. Additionally, trainees have an opportunity for supervision by a number of senior staff of other discipline as well resulting in supplementary learning opportunities of ethical practice through playing role of co-therapist and by clinical team participation.

The evaluation would include the skills acquired for;

- a) Functioning autonomously within the collaborative environment
- b) Ability to assume independent responsibility towards desired therapy outcome

- c) Building and maintaining therapeutic relationship
- d) Ability to carry out contextual and collaborative assessment
- e) Engaging clients in shared decision-making
- f) Maintaining therapy records as per the policy of the center
- g) Eliciting session and outcome feedback, and learn and reflect on them
- h) Maintaining confidentiality and adhering to ethical & professional guidelines

Part – B is second-half of Year-2. Trainees focus on acquiring professional competency in general medical setting through offering clinical workup and psychometric evaluations and a variety of advanced interventions targeted at psychological issues associated with acute, subacute and chronic health conditions. Recalling from the classroom discussion of behavioral medicine topics on the concept, theories, and models of clinical health psychology, trainees explore various domains of the professional practice and evaluation issues within the context of medical referrals and health & illness across lifespan. During the clinical assignments trainees demonstrate a clear understanding of psychological and behavioral influences on health and illness and psychophysiological models of disease and their application in health and health care. Trainees discuss with ease the implications of contemporary research and developments in health psychology such as psychoneuroimmunology, psychobiology and the effects of psychotherapy on the biology of brain. On completion of the postings the trainees should have acquired the skills needed to apply models of behavior change, and design appropriate evidence-supported psychological intervention on the basis of an initial clinical health case formulation. Trainees over time learn to take account of the relevant issues such as psychological responses to illness, disability and hospitalization, adherence to medical treatment, symptom reduction, progress made/making, and ability to make therapeutic alliance in planning the short- and long-term goal-oriented interventions. Also, acquire competency to prognosticate the case on the

basis of psychological theories, models of the etiology, progression, recovery, precursors, sequelae to psychological disorders associated with medical issues. Part-B posting will close by the end of Year – 2 with an Internal Evaluation and Viva Voce by faculty members shadowing and providing direct clinical supervision for a scheme of marks specified already.

The Part-B evaluation would include level of mastery acquired in various domains;

1. Ability to recognize and assess psychological responses to illness.
2. Ascertaining whether or not the presence of a psychological disorder and risk factors (using a range of assessment methods including psychometric assessments and interviews) in persons with a variety of chronic medical diseases
3. Integrating and synthesizing clinical data and presenting a diagnostic formulation, and treatment approaches
4. Ability to design and carry out an appropriate empirically-supported psychological treatment on the basis of an initial clinical health case formulation
5. Demonstrating a critical understanding of the role and responsibility of Clinical Psychologists in medical settings and professional and ethical issues related to working in health care settings and within a multidisciplinary team.

Psychotherapy Record Submission

Guidelines for Submitting Psychotherapy Records

Trainees are required to submit a total of five therapy records, one of which should specifically be a child therapy record. All the records should be printed with double line spacing and bound together in a single format. The records must be submitted in this bound format, with all of them included together. Registration number, Date first seen, Supervising Consultant's name and his/her signature should be shown on the opening page of each record. All records should be endorsed by the concerned supervisor and organized under the following heads:

1. Socio-demographic data
2. Presenting complaints
3. Summary of the case (history of present illness, significant past history, family history, personal history, pre-morbid level of functioning and findings on Mental Status Examination)
4. Diagnosis
5. Sociocultural and contextual factors including client's life situation
6. Short- and long-term management
7. Rationale for the intervention
8. Specific areas to be focused including short- and long-term objectives
9. Type and technique of intervention(s) used
10. Therapy processes
11. Changes in the type of therapy, approaches or objectives (if any, and reasons for the same)
12. Outcome
13. Goals to be achieved in short- and long-term follow-up
14. Future plans

Research Thesis

Guidelines for Submitting Research Thesis

Three (hardbound) copies with one softcopy on pen drive should be submitted in print (use double line space, and Times New Roman 12) format. All records should be certified by the concerned Guide and Co-guide (where applicable) and

forwarded by the Head of the Department under sign and seal. A declaration by the researcher that the present work is the product of his/her own efforts, carried out under the guidance of the supervisor/s mentioned and doesn't form a part of any other degree in the past, shall be inserted prominently in all copies. The Thesis shall be organized under the following heads:

1. An Introduction to the work
2. Review of literature in the form of different Chapters (up to 4, depending on the nature of research area)
3. Methods (Aim/s and objectives, Hypotheses, Sample (with inclusion and exclusion criteria), Sampling technique, and Sample size (procedure followed to determine) and Study design
4. Description of the tools/measures employed including those developed for the purpose of the study, the steps followed for modification or translation of the original tool, if any,
5. Procedure followed step by step and in detail
6. Statistical analysis carried out and the software employed
7. Results (using only one format)
8. Discussion (restricting to the data in hand)
9. Conclusion and implications (without grandiose claims)
10. Summary (crisp and in IMRD format)
11. References (APA guidelines)
12. Appendix – Copy of the following should be attached:
 - a) Consent form
 - b) Ethical committee clearance
 - c) Permission granted by the center/s for data collection
 - d) Tools employed in the research
 - e) Purchase bill or permission by author/s, or copyright waiver to use the tools
 - f) Declaration with regard to 'conflict of interest'
 - g) Copy of the report generated for plagiarism screening using approved software by the concerned university.
