3.2 Master in Medical Radiology and Imaging Technology (MMRIT)

Master in Medical Radiology and Imaging Technology

Introduction:

Learning Objectives:

Master in Medical Radiology & Imaging Technology is specifically aimed at those candidates pursuing a professional/academic career in Radiology & Imaging Technology. It is designed to provide specialized training in the scientific principles of modern imaging sciences and in the application of these principles in the field of Radiology & Imaging Technology. It is designed as a higher degree course suitable for graduates having experience in the technology of Radiology & Imaging Technology. The objective of the programme is to train students to be qualified, patient focused, compassionate, critical thinkers for the community who are engaged in lifelong learning.

Upon successful completion of the Master course, students will have developed a broad knowledge of the principles, technology, instrumentation, recent developments and proper handling of the modern radiological and imaging equipment's and proper execution of the various radiological procedures and be able to embark upon a successful career in their chosen direction of Imaging Science research.

Expectation from the future post graduate in providing research/academics/patient care

Perform a range of radiographic/radiological examinations on patients to produce high quality images.

1. Verifying informed consent, assuming responsibility for patient needs during procedures.
2. Applying principles of ALARA to minimize exposure to patient, self and others. Starting and maintaining intravenous access as prescribed, Identifying, preparing and/or administering medications as prescribed
3. Evaluating images for technical quality, ensuring proper identification is recorded.
4. Performing diagnostic radiographic/radiological and non-interpretive fluoroscopic procedures
5. Assist radiologists and senior staff in complex radiological examinations.
6. Record imaging identification and patient documentation quickly and accurately and observes protocols.
7. Research and development of new techniques and procedures as assigned.
8. Promotes effective working relationships and works effectively as part of a department / unit / team inter and intra departmentally to facilitate the department/unit's ability to meet its goals and objectives.
9. Follows established safety practices including biohazards, exposure control plan
10. Demonstrates respect and regard for the dignity of all patients, families, visitors and fellow employees to ensure a professional, responsible and courteous environment.
11. Identifying and managing emergency situations.
12. Performing ongoing quality assurance activities.
13. Ensure safe custody of all the accessories of the X-ray/radiological unit of which he/she is in charge. Keeps the X-ray room locked when not in use.
14. Understands and observes health and safety regulations/precautions and instruction for self and others protection. He/she should wear a dosimeter during duty hours.
15. Attends all in service education program required as per hospital policy.
16. Providing education and monitoring students and other health care providers.
17. Orientation and teaching students and new employees.
18. Learns new technologies and technologies as required by the professional bodies.
19. Impart appropriate training to the students and other staff.

20. Should have management and research skills.
21. To exhibit keen interest, initiative & drive in the overall development of the Department and 'Leadership Qualities' for others to follow.
22. He / She is expected to be confident and to perform all the duties diligently with utmost sincerity and honesty.
23. Any other duty/task/work assigned by any higher authority like Director, Dean, Medical Superintendent, Head of the Department from time to time; either in "Public Interest" or in the interest of upkeep / development of the Department / Institutions.

Minimum standard to start the MMRIT programmes:

Accordance with NCAHP regulations Institution/university with having medical college with hospital setup shall be permitted an annual intake capacity of 10 admissions (maximum) annually. No shall paramedical institutes/colleges having no own medical college shall permitted to start the Master degree programme. The phase-wise requirements to be fulfilled by the applicant colleges for obtaining letter of intent and Letter of Permission for establishment of new college or increase in annual intake MMRIT admissions annually from 10 to 15 intake. Maximum of intake in the Master degree programme is 15 candidates. No shall permission of the intake to be permitted more then 15 to any institute or college.

For the institutes to be capable of providing high quality training to the student and exposure to all the related modalities, it should have the following:

- X-ray Unit (CR, DR)
- Mobile X-ray unit
- Fluoroscopic unit
- Ultrasonography, Color Doppler Equipment
- Multi-slice CT Scan
- Mammography
- DEXA
- MRI
- DSA

Note: Starting MMRIT program in CT, MRI and Breast Imaging apart from the above equipment's the institute must have state of art high end equipment in these specializations.

The teaching faculty (with annual intake of up to 10 students) for the MMRITs should have a minimum of Master in the MRIT or MRIT with PhD in relevant subject.

- 1 Professor
- 2 Assoc. Professor
- 4 Asst. Professor
- 8 demonstrators

Method of teaching and learning-

- Lecture
- Tutorial
- Problem based learning
- Small group teaching and learning
- Continuous interactive learning
- Case-based
- Project based

- Research project- Research was considered by the group to be very important in order to keep pace with other professions and to generate a research background for our own profession.
- Seminars
- Clinical conferences
- E-learning
- Skills laboratory
- Industrial visit

Infrastructure requirements:

- Minimum 4 classrooms with minimum seating capacity of 10 students
- Faculty rooms, Common rooms for students
- Auditorium/Conference room with minimum seating capacity of 150 students.
- Minimum 2000 sqft Library
- Student canteen/cafeteria

Eligibility for admission:

Selection procedure:

Bachelor in Medical Radiology & Imaging Technology (3+1)/B.Sc. Medical Technology Radio diagnosis and Imaging/ B.Sc. Radiological Technology/B.Sc. in Radiography/B.Sc. Medical Technology (X-ray) or equivalent to BMRIT with a minimum 60% marks in Bachelor. Bachelor course must be three years course and one year of internship/one year of working experience must be considered for the Master degree admission.

The selection of the candidates for admission to the course is made on merit on the basis of combined entrance examination conducted by NCAHP/NEET. The admission notice is released in all leading English Newspaper. Only those candidates will be eligible who score minimum 60% marks in the entrance test for General Category candidates and 55% of for those belonging to SC/ST category.

Selection of the candidate on the basis of Entrance examination conducted by the national commission (NCAHP) norms.

Elective specializations:

MMRIT course offers three elective broad specializations during the admissions. First and Second semesters will be having common core subjects to all the students. During the study of Third and Fourth semesters there will be a three elective broad specializations. Three elective broad specializations are as follows:

- CT Imaging Technology
- MR Imaging Technology
- Breast Imaging Technology

Selecting of elective broad specializations must be done during the admission itself as per ranking. There will be no option to change the elective broad specializations after the start of the academic year.

Selection of eligible candidates:

Every student, selected for admission to a MMRIT in any of the para medical institutions/university on acquiring BMRIT or an equivalent qualification thereto shall have obtained permanent registration with

the NCAHP, or any of the State Medical Council(s) or shall obtain the same within a period of three months from the date of his/her admission, failing which his/her admission shall stand cancelled.

Selection to the MMRIT course shall be based on merit obtained in the National Entrance and Eligibility Test (NEET) conducted by the central government or its authorized agency.

Accordance with NCAHP regulations Institution/university with having medical college with hospital setup shall be permitted an annual intake capacity of 10 admissions (maximum) annually. No shall paramedical institutes/colleges having no own medical college shall permitted to start the Master degree programme. The phase-wise requirements to be fulfilled by the applicant colleges for obtaining letter of intent and Letter of Permission for establishment of new college or increase in annual intake MMRIT admissions annually from 10 to 15 intake. Maximum of intake in the Master degree programme is 15 candidates. No shall permission of the intake to be permitted more then 15 to any institute or college.

Number of approved admission/seats will be distributed on elective subjects as follows:

Intake: 10 seats
MMRIT – Elective of CT Imaging Technology: 4 seats
MMRIT – Elective of MR Imaging Technology: 4 seats
MMRIT – Elective of Breast Imaging Technology: 2 seats

Duration of the course

Duration of the course: 4 semesters or 2 Years (640 hours of Theory & Practical Classes).
Total - 2560 hours

Medium of instruction:

English shall be the medium of instruction for all the subjects of study and for examination of the course.

Maximum period for completion of the course:

The maximum period for completion of MMRIT is 4 years.

If a candidate does not complete within the 4 years, he/she should re-register.

Attendance and Monitoring progress of studies:

A candidate shall study in concerned department of the Institute for the entire period as a full-time student.

No candidate is permitted to work in any other laboratory/college/ hospital/pharmacy etc. while studying.

A candidate who has a minimum of 80% attendance in theory and practical separately and who has fulfilled other requirements of the course shall be permitted to appear for the examination.

A candidate having a shortage of attendance shall repeat the exam when it is offered next.

✓

Stipend: All students shall be paid minimum sum of Rupees 15000/- per month as stipend in all the four semesters or at par with other similar streams as per consumer price index as per NCIAHP Act.

Assessment and Evaluation

Scheme of Evaluation

The academic performance is assessed on the basis of both Continuous Internal Evaluation (CIE) assessment and End Semester Examination (ESE) in each semester. Weightage will be in the ratio of 30 % for CIE and 70 % for ESE.

Continuous Internal Evaluation (CIE)

- 30% of the total marks is allotted for CIE in each course.
- 50% of CIE shall be based on the average of marks obtained in two notified formative written tests. Absence without prior permission for a formative test shall result in scoring of the test as zero.
- The remaining 50% of CIE will be based on internal assessments in the form of evaluation of seminars, journal club presentations, case presentations, completion of assignments etc. which will be specified in the individual course curricula.
- CIE will be conducted for theory and practical for each course wherever applicable.
- A Candidate must secure at least 40% of total marks fixed for CIE in the particular course in order to be eligible to appear for the End Semester Examination for that course.

End Semester Examination (ESE)

- There shall be a University Examination at the end of each semester.
- To be eligible to appear for University examination a candidate should fulfil all the following conditions
- Undergone satisfactorily the approved program of study in the course/courses for the prescribed duration
- 80% attendance separately in theory and in practical/hospital postings, in each course
- Shall have the minimum attendance requirement in all courses of that semester for the first appearance
- Secure at least 40% of total marks fixed for CIE in a particular course; and
- Fulfil any other requirement that may be prescribed by the University from time to time.
- The End Semester Examination will consist of Theory examination for all courses and in addition, Practical examination for specified courses.
- Theory examination
- Written tests with question types, pattern, duration and weightage as specified in the Course-wise curricula
- Setting of question papers and evaluation of answer scripts as per University regulations
- Practical examination
- Broad outline would be in the form of Spotters, Demonstration of equipment handling, Case based discussions.

Criteria for pass:

A Candidate has to score 50% each in theory and practical wherever applicable to be declared as pass. In case of fail, subsequently candidate has to appear for both theory and practical examination of the university in that particular course.

Attendance and appearance for Exam:

Candidates not possessing required attendance in a particular course as prescribed by University will not be allowed to take up examinations and has to appear for supplementary examination whenever university conducts exam for the particular course very next time.

Overview

Core courses (credits)	1. Radiological and Medical Physics 2. Clinical Special Radiography Positioning 3. Modern Radiological Imaging - Equipment and Physics 4. Contrast Media and Interventional Radiology 5. Modern Imaging and Special Radiological Procedures 6. Biostatistics and Research Methodology
Broad specific core courses (CT Technology)	1. Principles of CT Imaging Technology 2. CT Imaging Procedures and Scanning Protocols 3. Basic and Cross Sectional Anatomy in CT Imaging 4. Advancements in CT Technology 5. Quality Assurance, Radiation Protection and Patient care in CT Imaging 6. Basic Pathology and Image Interpretation in CT Imaging
Broad specific core courses (MRI Technology)	1. Principles of MR Imaging Technology 2. MR Imaging Procedures and Scanning Protocols 3. Basic and Cross Sectional Anatomy in MR Imaging 4. Advancements in MRI Technology 5. Planning, Safety and Patient care in MR Imaging 6. Basics Pathology and Image Interpretation in MR Imaging
Broad specific core courses (Breast Imaging Technology)	1. Principles of Breast Imaging Technology 2. Breast Imaging Procedures and Scanning Protocols 3. Basics and Cross sectional anatomy of Breast 4. Advancements in Breast Imaging Technology 5. Quality Assurance, Radiation Protection and Patient care in Breast Imaging 6. Basics Pathology and Image Interpretation in Breast Imaging

Distribution of Credits:

L – Lectures- 1 hour: 1 credit

T – Tutorial- 1 hour: 1 credit

P – Practical- 2 hours: 1 credit

Clinical (Studentship)- 3 hours: 1 credit

Studentship or observership must include:

- A minimum of 14 hours per week is considered as studentship in very semesters.
- Provide simulation and skill labs for practising skills specific to the program in the initial years of observership/studentship.
- Every semester must have journal club/UG teaching/Mentoring/seminars/workshops on new developments/ technologies. Check annexure for marking criteria.

- All practical skills must be supervised and recorded in a digital Logbook and skills to be evaluated after the completion of the studentship.

Dissertation:

A candidate is required to carry out a research study in select area of his/her subject, under the supervision of a faculty guide. The results of such a study shall be submitted to the University in the form a dissertation as per the prescribed format and within the date stipulated by the University.

The dissertation work is aimed at training a postgraduate candidate in research methodology and techniques. It includes identification of the problem, formulation of a hypothesis, review of literature, getting acquainted with recent advances, designing of a research study, collection of data, critical analysis, and comparison of results and drawing conclusions.

Guide:

A Guide shall be a Post MD/PhD or MMRIT with atleast 2 years of teaching experience. Each guide can take up to a maximum of three students per academic year. However a co-guide can be opted wherever required with prior permission of the Institute and University. The co-guide shall also be a postgraduate teacher recognized by the University as a guide.

Candidate shall submit synopsis to the University through the Guide and Head of the Institute on or before end of first semester or within date notified by the University, whichever earlier.

Once the synopsis is approved and registered by the University no change in the topic or Guide shall be made without the prior approval of the University.

In the event of registered Guide leaving the Institute or in the event of the death of the Guide, a change of Guide shall be permitted by the University, on the specific recommendation of the Institute.

Schedule

The following procedure and schedule shall be strictly followed:

Ethical clearance

Ethical Clearance should be obtained for a study involving any procedure on human subject. The candidate should apply for the certificate to the Ethics Committee of the Institute/University, through the Guide and present the study before the Committee for clearance. A copy of the certificate should be attached along with the synopsis forwarded at the time of submission of synopsis. All such clearance should be sought within three months of the commencement of the I semester.

Submission of synopsis

Synopsis should be vetted by guide, HOD and departmental curriculum development cell and approved by the institutional ethics committee before submission to the university. The synopsis should be submitted as per the format on or before the end of first semester, or within the date notified by the University, whichever is earlier. Once the synopsis is approved and registered by the university no change in the topic or Guide shall be made without the prior approval of the University.

Final submission of the dissertation

The dissertation complete in all respects and duly certified by the Guide/Co-guide, Course Coordinator/ HoD/ Director should be submitted to the Controller of Examinations as per the date specified by the University, generally three months before commencement of University examinations.

Preparation of dissertation

The written text of dissertation shall be as per the format, shall not exceed 100 pages (cover to cover). It should be neatly typed with 1.5 line spacing on one side of the paper (A4 size: 8.27" x 11.69") and properly bound. Spiral binding should be avoided. E-submission of the dissertation is mandatory.

Scheme of evaluation

The dissertation will be evaluated at the time of university examination of IV semester by a panel of examiner (Internal and External) appointed as per guidelines of NCAHP.

Evaluation format for dissertation

Sl. No	University Evaluation	Marks
		Max Marks
1.	Objectives, Research Question, Literature Review	25
2.	Results and Discussion	25
3.	Viva voce	50
	Total	100

Criteria for pass:

A candidate is declared to have passed the examination in a subject if he secures minimum 40% of marks separately and overall 50% marks separately in theory and practical including internal assessment.

A candidate who fails in any subject shall have to appear only in that subject in subsequent examination.

Carry over benefit:

A candidate shall appear for all the subjects of that particular semester in the University examinations but failed in that semester can avail this benefit, provided:

- A candidate who fails in not more than 2 subjects in I semester is allowed to move to II semester. The candidate with back log subjects shall take both I semester backlog subjects as well as II semester subjects. The candidate with a backlog of not more than 2 subjects in II semester is allowed to go to the III semester till he/she clears all I semester subjects.
- The candidate with a backlog of not more than 2 subjects in III semester is allowed to go to the IV semester till he/she clears all II semester subjects.
- Results of candidates will be declared at the end of IV semester only when the all backlog subjects are cleared by the candidates.

Maximum attempt: No more than three attempts shall be allowed for the candidate to pass the any subjects. If he/she fails to clear any subjects within three attempts will be considered as withdrawal of the course. Grading and Classification

Re-totalling:

Re-totalling of marks is permitted only for theory papers. The University, on application within the stipulated time and remittance of a prescribed fee, shall permit a re-totalling of marks for the course/s applied. The marks obtained after re-totalling shall be the final marks awarded. There is no re-evaluation offered for any of the subjects in MMRIIT.

Supplementary Examinations:

Supplementary examination shall be conducted by the university for the benefit of unsuccessful candidates. Lower semester examinations shall be conducted by the University along with current semester examinations for the benefit of unsuccessful candidates.

- A Candidate detained for lack of attendance will be barred from appearing in any one or all course/s for the supplementary examination.
- A candidate permitted to appear for the supplementary examination can improve his internal assessment marks before he takes the supplementary examination by subjecting himself to internal assessment.

Conduct and discipline:

Candidates shall conduct themselves within and outside the premises of the Institute in a manner befitting the student of an educational institution.

As per the order of Honorable Supreme Court of India, ragging in any form is considered as a criminal offence and is banned. Any form of ragging will be severely dealt with.

The following act of omission and/or commission shall constitute gross violation of the code of conduct and are liable to invoke disciplinary measures:

Ragging as defined and described by the Supreme court/Government Lack of courtesy and decorum; indecent behaviour anywhere within or outside the campus. Willful damage or stealthy removal of any property/belongings of the Institute/Hostel or of fellow candidates/citizens. Possession, consumption or distribution of alcoholic drinks or any kind of hallucinogenic drugs. Mutilation or unauthorized possession of library books. Noisy or unseemly behaviour, disturbing studies of fellow candidates. Hacking in computer systems (such as entering into other person's domain without prior permission, manipulation and/or damage to the computer hardware and software or any other cyber crime etc.) Plagiarism of any nature. Any other act of gross indiscipline as decided by the Board of Management from time to time.

Commensurate with the gravity of offense, the punishment may be: reprimand, fine, expulsion from the hostel, debarment from an examination, disallowing the use of certain facilities of the Institution, rustication for a specific period or even outright expulsion from the Institution, or even handing over the case to appropriate law enforcement authorities or the judiciary, as required by the circumstances.

For any offence committed in (i) a hostel (ii) a department or in a classroom and (iii) elsewhere, the Chief Warden, the Head of the Department and the Head of the Institution, respectively, shall have the authority to reprimand or impose fine.

All cases involving punishment other than reprimand shall be reported to the Vice-Chancellor.

Cases of adoption of unfair means and/or any malpractice in an examination shall be reported to the Controller of Examinations for taking appropriate action.

Grading system

Letter grades and CGPA

The performance of a candidate shall be evaluated according to a Letter Grading System, based on the both CIE and ESE. The letter grades (O, S, A+, A, B, C, F and I) indicate the level of academic achievement assessed on a 10 point scale (0 to 10).

Marks Range (%)	Grade Point	Letter Grade	Descriptor	Classification	CGPA
90 & above	10	O	Outstanding	First Class with Distinction	7.50 and above
80-89	9	S	Excellent		
75-79	8	A+	Very Good		
65-74	7	A	Good	First Class	6.50 - 7.49
60-64	6	B	Average	Second Class	6.00 - 6.49
50-59	5	C	Pass		5.00 - 5.99
Below 50	0	F	Fail	Fail	Less than 5.00
Absent	0	I	Absent		

For non-credit courses 'Satisfactory' (P) or 'Unsatisfactory' (F) shall be indicated instead of the letter grade and this will not be counted for the computation of SGPA/CGPA.

A candidate shall be considered to have completed a course successfully and earned the credits assigned, if he secures an acceptable letter grade in the range O-C. Letter grade 'F' in any course implies failure in that course and no credit is earned.

A candidate having satisfactory attendance at classes and meeting the passing standard at CIE in a course, but remained absent from ESE shall be awarded 'P' grade in that course.

Grade Point Averages:

The overall performance of a candidate will be indicated by Grade Point Average (GPA). For each course grade points will be awarded as per a letter grading system.

Semester Grade Point Average (SGPA) is computed as follows:

$\sum [(course\ credit) \times (Grade\ point)]$ for all courses with

Letter grades, including F

SGPA = _____

$\sum [(course\ credits)]$ for all courses with Letter grades, including F

Cumulative Grade Point Average (CGPA) is computed as follows:

$\sum [(course\ credit) \times (Grade\ point)]$ for all courses for all semesters

with, Letter grades excluding F

CGPA = $\frac{\sum [(course\ credits)] \text{ for all courses for all semesters with Letter grades, excluding F}}{\sum [(course\ credits)] \text{ for all courses for all semesters with Letter grades, excluding F}}$

Letter grades, excluding F

Conversion of Grades into Percentage

Formula for conversion of GPA into percentage: CGPA earned $\times 10$ = Percentage of marks scored

Illustration: (CGPA Earned 8.18×10) = 81.80 %

Award of Class:

The candidate, who has passed all the courses prescribed, shall be declared to have passed the program. Class will be awarded only to those who pass the entire examination in the first attempt and on the basis of the aggregate of marks scored in individual semester.

- A candidate who secures GPA ≥ 7.00 and above in first attempt shall be declared to have passed in 'First Class with Distinction'.
- A candidate who secures GPA ≥ 6.00 or more but less than 7.00 in the first attempt shall be declared to have passed in 'First Class'.
- A candidate who secures GPA ≥ 5.00 or more but less than 6.00 in the first attempt shall be declared to have passed in 'Second Class'.
- A candidate who secures GPA ≥ 4.00 or more but less than 5.00 in the first attempt shall be declared to have passed in 'Pass Class'.
- Candidates who pass the examinations in more than one attempt shall be declared as passed in 'Pass' class irrespective of the percentage of marks secured.
- An attempt means the appearance of a candidate for one or more courses either in part or full in a particular examination. If a candidate submits application for appearing for the examination but does not appear for any of the courses either in full or part in the university examination, he can appear for supplementary examination provided other conditions such as attendance requirement, internal assessment marks, etc are fulfilled and his appearing in the supplementary examination shall be considered as the first attempt.

Graduation requirements:

Candidate shall be declared eligible for the award of the degree if he or she has:

- Fulfilled all degree requirements.
- No dues to the University, Institution, departments, hostels, library etc.
- No disciplinary action pending against him.

The award of degree must be recommended by the Board of Management.

Convocation:

Degrees will be awarded in person to all eligible students who have graduated during preceding academic year at the annual convocation.

Board of examiners for each semester:

The Examination Committee shall recommend in such manner as may be determined by the State Board, names of suitable experts as the chairman of panels of Board of examiner for setting and moderating the question papers and arrange the panels of moderators and examiners prepared in such manner as per the guidelines of the NCAHP.

HOD of Radiology: Chairperson

Programme Co-ordinator/Course Co-ordinator/Chief of MRIT /Incharge of MRIT: Co-chairperson

Subject Experts:

External examiner (one person):

- The examiner must be subject expert.

Internal examiner (one person):

- The examiner must be subject expert.

[Handwritten signature]

"Curriculum Handbook of Medical Radiology and Imaging Technology (Intellectual Property of the National Commission for Allied and Healthcare Professions, Ministry of Health and Family Welfare)."

First Semester

Subject: Radiological and Medical Physics

Subject Code: MMRIT01

RATIONALE

Radiological and Imaging Technology instrumentation and its physics are the primary pillars underlying the practice of radiological and Imaging technology and understanding the principles of radiation physics helps MMRIT to become a qualified MMRIT technologist.

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Describe general physics related to imaging

CO2: Differentiate between within general radiation

CO3: Identify construction of radiology equipment's

CO4: Interpret quality of control of radiology equipment's

CO5: Differentiate between x-ray equipment's and other radiology related equipment's

CO6: Describe production of x-rays

CO7: Describe circuit system of radiology equipment's

CO8: Describe the structure and working of x-ray tube, production of x-rays

CO9: Describe the types of x-ray tube and heat dissipation methods

CO10: Explain the x-ray generator circuits

CO11: Describe the different circuit types

CO12: Describe the meters and exposure timers

CO13: List the control of scattered radiation

CO14: Describes about the fluoroscopy

TUTORIAL ASSIGNMENTS

Tutorials should be planned to enhance learning. The faculty shall decide suitable tutorial assignments of minimum one hour per unit based on the curriculum.

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency.

Unit	Topic and contents	Hours	Marks
1.	Basic concepts: Units and measurements-Force, work, power and energy-Temperature and heat-SI units of above parameters. Atomic structure-atom model-Nucleus-electronic configuration-periodic table-Isotopes-Ionization-excitation-Binding energy-electron volt-Electromagnetic radiation-Quantum nature of radiation-mass energy equivalence-Fluorescence-electromagnetic spectrum.	4	5
2.	Electricity and magnetism: Electric charges, Coulomb's law-Unit of charge-Electric potential, unit of potential-Electric induction, capacitance and Capacitors, series and parallel connection-electric current, unit, resistance, ohm's law, electric power, Joule's law. Varying currents-Growth and decay of current in LR circuit time constant, charge and discharge of a Capacitor through a resistance and inductance. Oscillations in an LC circuit. Alternating currents: Peak and RMS values and current and voltage, circuit containing LR, CR and LCR-Power factor, series and parallel LCR circuits, DC circuit, Ohm's law, resistivity, series and parallel combination, EMF, Kirchhoff's law, heating effect of current. Electromagnetic waves: Introduction, Maxwell's equation, electromagnetic waves, energy density and intensity, momentum, electromagnetic spectrum and radiation in Atmosphere.	4	5
3.	Electronics Semiconductors; Conduction in crystals, Energy bands. Intrinsic and Extrinsic semiconductors n-type and p-type semiconductors, majority and minority carriers. Semiconductor diodes: p-n junction-properties forward and reverse bias, characteristics of p-n junction Rectifiers-Half-wave and full wave, ripple factor, Efficiency of HW and FW rectifiers. Filter circuits; Zener diode, regulated power supply. Transistors-Symbols, Transistor connections and characteristics, Transistor as an amplifier, load line analysis, operating point, types of amplifiers-voltage and power amplifiers. Feedback-negative feedback in amplifiers.	4	5
4.	Discovery of x-rays-X-ray production and properties: Bremsstrahlung radiations-Characteristics X-Rays, factors affecting X-ray emission spectra, X-ray quality and quantity, HVL measurements, heel effect, soft and hard X-Rays, added and inherent filtration, reflection and transmission targets.	4	5
5.	Heat Definition of heat, temperature, Heat capacity, specific heat capacity, Heat transfer-conduction, convection, radiation, thermal conductivity, equation for thermal conductivity (k), the value of k of various material of interest in radiology, thermal expansion, Newton's law of cooling,	4	5

	Heat radiation, perfect black body, Stefan law, application in Diagnostic Radiology (Heat dissipation in both stationary and rotating X-ray tubes).		
6.	Interaction of ionizing radiation with matter-Types of interactions of X-and gamma radiation, Photoelectric & Compton, Pair production, annihilation radiation. Interaction of X and gamma rays: Transmission through matter, law of exponential attenuation, half value layer, and linear attenuation coefficient-coherent scattering-photonuclear disintegration-Particle interactions. Interactions of X rays and Gamma rays in the body; fat-soft tissue-bone-contrast media-total attenuation coefficient-relative clinical importance.	4	5
7.	Exponential attenuation (linear/mass attenuation coefficients), Half Value Thickness (HVT), Tenth Value Thickness (TVT), dependence on energy and atomic number. Radiation intensity and exposure, photon flux and energy flux density. LET, range of energy relationship for alpha, beta particles with X-Rays. Physical quantity, its unit and measurement: Fundamental and derived quantity, SI unit, various physical/radiation quantity used in Diagnostic Radiology and its unit.	3	5
8.	X-ray tube: historical aspects, construction of X-ray tubes, requirements for X-ray production(Electron source, target and anode material), tube voltage, current, space charge, early X-ray tubes(Coolidge tubes, tube envelop and housing) cathode assembly, X-ray production efficiency, advances in X-ray tubes, anode angulation and rotating tubes-line focus principle-space charge effect, tube cooling-Modern X-ray tubes-stationary anode, rotating anode, grid controlled X-ray tubes, heel effect, off focus radiation, tube insert and housing-Tube rating-Quality and intensity of x-rays-factors influencing them. Production of x-rays: X-ray tube, gas filled x-ray tube, construction working and limitations; stationary anode x - ray tube; construction, working, methods of cooling the anode, rating chart and cooling chart;	4	5
9.	Rotating anode x - ray tube: construction, working rating chart, speed of anode rotation, angle of anode inclination, dual focus and practical consideration in choice of focus, anode heel effect, grid controlled x - ray tube; effect of variation of anode voltage and filament temperature; continuous and characteristics spectrum of x - rays, inherent filter and added filter, their effect on quality of the spectrum. Grid controlled and high-speed tubes, focal spot size, speed of anode rotation, target angle, inherent filtration, radiation leakage and scattered radiation). Interlocking and X-ray tube overload protection.	4	5

	Heat dissipation methods, tube rating, heat units, operating conditions and maintenance and QA procedures.		
10.	Filament current and voltage , X-ray circuits (primary circuit, auto transformer), types of exposure switch and timers, principle of automatic exposure control (AEC) and practical operation, filament circuit, high voltage circuits, half wave, full wave rectification, three phase circuits. Types of generators, 3 phase, 6 and 12 pulse circuits-high frequency generators-falling load generators, Capacitors discharge and grid control systems. X-ray generator circuits: Vacuum tube diodes-semi-conductor diodes-transistor-Rectification-half and full wave-self rectification-X-ray generator; filament circuit-kilo Voltage circuit-single phase generator-three phase generator-constant potential generator-Fuses, switches and interlocks-Exposure switching and timers-HT cables-earthing.	4	5
11.	High tension circuits: H.T. generator for x-ray machines, three phase rectifier circuits, three phase six rectifier circuit, three phase 12 rectifier circuit, high and medium frequency circuits; capacitance filter control and stabilizing equipment; mains voltage compensator, mains resistance compensator, compensation for frequency variation, control of tube voltage, kV compensator; high tension selector switch, filament circuit, control of tube current, space charge compensation.	2	2
12.	Meters and exposure timers: Moving coil galvanometer: construction and working/conversion to millimeter, ammeter and voltmeter, meters commonly used in diagnostic x-ray machines, pre reading kV meter and millimeter, digital panel meters. Clockwork timers, synchronous motor timer, electronic timers, photo metric timers (fluorescent and photoelectric effect as applied in timers), ion chamber-based timers, integrated timer.	3	5
13.	Control of scattered radiation and Beam limiting devices: cones, diaphragms, light beam collimator, beam centering device, methods to verify beam centering and field alignment; Filters- inherent filters, added filters, heavy metal filters, grids; design and control of scattered radiation, grid ratio, grid cut-off, parallel grid, focused grid, crossed grid, grided cassettes, stationary and moving grid potter bucky diaphragms, various types of grid movements; single stroke movement, oscillatory movement and reciprocatory movement.	2	5
14.	Fluoroscopy: Fluorescence and phosphorescence - description, fluorescent materials used in fluoroscopic screens, construction of fluoroscopic screen and related accessories, tilting table, dark adaptation. Image intensifier - Construction and working, advantages	4	5

	over fluoroscopic device, principles and methods of visualising intensified image, basic principles of closed circuit television camera and picture tube. Vidicon camera, CCD. Automatic brightness control, automatic exposure control, chamber selection during fluoroscopy. Serial radiography: Manual cassette changer, rapid automatic film changer, basic principles of cine fluoroscopy and angiography use of grid controlled x-ray tube.		
15.	Care and Maintenance of X-ray equipment; General care; functional tests; testing the performance of exposure timers, assessing the MA settings, testing the available KV, measurement of focal spot of an x-ray tube, testing the light beam diaphragm, practical precautions pertaining to Brakes and locks, H.T. cables, meters and controls, tube stands and tracks as well as accessory equipment.	2	3

Subject: Clinical Special Radiography Positioning

Subject Code: MMRT02

RATIONALE

Clinical Radiography Positioning provides the students with knowledge of x-ray imaging, positioning and all the care that should be taken.

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Understand the basic patient positioning during radiographic investigation.

CO2: Apply special positioning skills for different pathological and physical conditions.

CO3: Application of equipments while working in radiology departments.

CO4: Choose proper position during radiography.

CO5: Explain relative positions of x-ray tube and patient relevant exposure factors during radiography.

CO6: Explain the use of accessories.

CO7: Explain the anatomic and physiological basis of the procedure to be undertaken.

CO8: Explain the radiographic appearances of both normal and common abnormal conditions.

CO9: Prepare management and positioning of patients

CO10: Correlate of indications, contraindications of the patient

CO11: Understand the patient preparations needed before any radiological examination.

CO12: Generalize knowledge of post procedural care.

CO13: Students will be able position the patients for radiological procedures.

CO14: Knowledge of image quality in radiological images.

CO15: Management of patients in radiology department for various procedures.

CO16: Ability to handle emergency situations in radiology department.

TUTORIAL ASSIGNMENTS

Tutorials should be planned to enhance learning. The faculty shall decide suitable tutorial assignments of minimum one hour per unit based on the curriculum.

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency.

Unit	Topic and contents	Hours	Marks
1.	Principles of Radiography: Preparation of the Room, Apparatus and Instruments Positions of the Patient: Erect, Sitting, Supine, Prone, Lateral, Oblique, Decubitus Etc. Relative position of X-Ray tube and patient, relevant exposure factors. Use of accessories such as radiographic cones, grid and positioning aids. Anatomic and Physiological basis of the procedure, Association with theory with practical work. Radiographic appearances, both normal and common abnormal conditions where elementary knowledge of the pathology involved will ensure the application of the appropriate radiographic technique. Modifications in technique for various disabilities and types of subject. Radiation protection, use of gonad shield, practical methods of reducing radiation dose to the patient.	6	5
2.	Upper limb: Special projections for the whole hand, fingers, wrist joint, forearm, elbow joint and humerus. Supplementary projections for Scaphoid, Carpal tunnel, Ball Catchers projections, Head of the Radius, Supracondylar fracture and Olecranon process	6	9
3.	Lower limb: Special projections for the whole foot, toes, calcaneum, ankle joint, leg, knee- joint, patella and femurs. Supplementary projections for Talo-Calcaneal joint, Forced projections for torn ligaments, Flat Feet, Club Feet, Intercondylar projections for loose bodies in the knee, Axial projection for Patella.	6	9
4.	Shoulder Girdle and Thorax: Special projections for the shoulder joint, Scapula, Acromio-Clavicular joint, Clavicle, Sternoclavicular joint, Sternum and Ribs. Supplementary projections for the axial projection of Clavicle, Bicipital groove, Coracoid process.	6	6

5.	Vertebral Column: Special projections for Atlanto -Occipital joint, cervical spine, Cervico- thoracic Junction, thoracic Spine, lumbar Spine, Lumbo Sacral Region, Sacrum and Coccyx. Supplementary projections for the intervertebral foramina, posterior arch of Atlas, Flexion and Extension of Cervical Spine, Scoliosis and Kyphosis, Sacro Iliac Joint.	6	6
6.	Skull: Special projections for cranium and facial bones; Supplementary projections for trauma, Towne's method, Sellatursica, Optic foramina, Jugular foramina, Temporal bones, Mastoids, Petrous bone, Zygomatic arches, Orbits, Maxillae, Nasal bones, Mandible, Temporomandibular joints. Nasal Sinuses: Techniques for Frontal, Maxillary, Ethmoidal and Sphenoid Sinuses, erect and horizontal projections for fluid levels.	6	6
7.	Pelvic girdle and hip region: Special projections for the whole pelvis, Sacro-Iliac joints, hip joint and Neck of Femur. Supplementary projections for the greater and lesser trochanters of Femur. Frog leg projection, Ischium, Symphysis Pubis, Ileum, Acetabulum and Congenital Dislocation of Hip, Arthrodesis. Skeletal survey: Skeletal survey for metabolic bone disease, metastases, hormonal disorder, renal disorders.	6	6
8.	Dental Radiography Technique for intra oral full mouth.- Occlusal projections Extra oral projections including orthopantomography.- Supplementary techniques. Upper respiratory system Technique for postnasal airways, larynx, trachea, thoracic inlet, Valsalva manoeuvre. - Phonation.	6	6
9.	Lungs and Mediastinum: Supplementary projections: Antero-posterior, obliques, lordotic, apical projection, use of penetrated postero-anterior projection. - Expiration technique. - Technique for pleural fluid levels and adhesions. Abdominal viscera- Technique for plain film examination. - Projection for acute abdomen patients. - Technique to demonstrate: Foreign bodies, Imperforate anus.	6	6

10.	Mammography: Basic views, special views, wire localization.	6	3
11.	Trauma radiography/Emergency radiography General precautions, Asepsis in techniques - Checking of mains supply and functions of equipment, selection of exposure factors, explosion risk, radiation protection and rapid processing techniques.	6	3
12.	Soft Tissue Radiography: High and low kilo voltage technique; differential filtration. Non - screen technique - simultaneous screen and non -screen technique. Multiple radiography. Uses of soft tissue radiography. High kV Radiography: General principles Relation to patient dose Change in radiographic contrast. Neonatal and Paediatric Radiography Forensic Radiography Scatter elimination; beam collimation; grid ratio. Speed and type of grid movement	6	5

Subject: Modern Radiological Imaging - Equipment and Physics

Subject Code: MMRIT04

RATIONALE

Modern radiological Imaging Equipment and Physics provides the students knowledge about the modern x-ray equipment and working principle. Modern imaging techniques – including X-rays, ultrasound, CT scans and MRI – can show structures inside your body in great detail. Radiologic Physics is the study of medical imaging components, technology, and parameters in an effort to produce optimal imaging results. The goal with studying radiologic physics is to ensure you get clear images while ensuring the patient is safe from radiation.

COURSE OUTCOMES

At the end of the course students will be able to...

CO001: Describe the special radiological equipments

CO002: Describe the digital and computed radiography

CO003: Describe PACS, RIS and HIS

Subject: Contrast Media and Interventional Radiology

Subject Code: MMRIT05

RATIONALE

Interventional radiology (IR) helps student MRIT to gain about the basics diagnostics and interventional procedures and to learn procedures in modalities like digital radiography CT and MRI and nuclear medicine and to increase the level of understandings and knowledge required to meet current radiologic procedures and to understand the physical principles of radiography and basic radiography positioning to perform the procedures. it a medical specialty that performs various minimally-invasive procedures using medical imaging guidance, such as x-ray fluoroscopy, computed tomography, magnetic resonance imaging, or ultrasound. IR performs both diagnostic and therapeutic procedures through very small incisions or body orifices

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Know the basic principle and physics of interventional equipment.

CO2: Know the management and positioning of patients while performing interventional radiological procedure.

CO3: Have knowledge about the indications, contraindications, contrast media, radiation dose, exposure timing and radiation safety measures for the different interventional radiological procedure..

CO4: Understand the patient preparation needed before any interventional radiological procedures.

CO5: Have knowledge about the post procedural care and safety.

Subject: Modern Imaging and Special Radiological Procedures

Subject Code: MMRIT06

RATIONALE

Contrast & Special Radiological Procedures are diagnostic procedures usually performed by giving contrast through oral or intravenous to diagnose the disease. These imaging procedures are done under the guided of fluoroscopy or c-ran equipment.

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Prepare management and positioning of patients while performing radiological procedures.

CO2: Correlate of indications, contraindications, contrast media, radiation dose, exposure timing and radiation safety measures for different radiological procedures.

CO3: Understand the patient preparations needed before any radiological examination.

CO4: Generalize knowledge of post procedural care.

CO5: Students will be able position the patients for radiological procedures.

CO6: Knowledge of image quality in radiological images.

CO7: Management of patients in radiology department for various procedures.

CO8: Ability to handle emergency situations in radiology department.

CO9: Precautions and care required in interventional suits.

MMRIT Radiological Clinical Education- part II (studentship): 16 hrs/week

The course may offer hands-on training or practical sessions, allowing participants to enhance their skills in teaching and research.

Elective – Specialization of CT Imaging Technology Third Semester

Subject: Principles of CT Imaging Technology

Subject code: MMRT07

Rationale: It aims to provide knowledge related to the basic working principle and construction of CT scanners and the various hardware and software mechanisms required for obtaining the cross-sectional imaging. It also gives a brief review of the history and evolution of the CT scanners.

Course Outcome

At the end of the semester student must be able to:

CO1: Should gain a comprehensive understanding of the principles behind CT imaging, including the physics and technology involved in generating cross-sectional images.

CO2: Will learn the practical aspects of CT scanning such as patient positioning, selection of appropriate protocols and the use of contrast agents.

CO3: Students should be able to explain the process of image reconstruction in CT and understand how raw data is transformed into meaningful images.

CO4: Will learn to assess CT image quality and identify common imaging artefacts, as well as strategies to minimize or correct these artefacts.

4.	The CT Handbook: Optimizing Protocols for Today's Feature-Rich Scanners	<u>Timothy P. Szczykutowicz</u>	Medical Physics Publishing Corporation

Subject: CT Imaging Procedures and Scanning Protocols

Subject code: MMRIT08

Rationale

CT Procedures and Scanning Protocol course is to provide participants with a comprehensive understanding of the various procedures involved in computed tomography (CT) imaging and the principles of selecting appropriate scanning protocols for different clinical scenarios.

Outcome

At the end of the semester student must be able to:

CO1: CT procedures and scanning protocols result in high-quality images that allow radiologists and healthcare professionals to make accurate and precise diagnoses. Clear and detailed CT images aid in identifying and characterizing various medical conditions, such as tumors, fractures, infections, and other abnormalities.

CO2: Will be able to acquire Accurate CT imaging helps healthcare providers create effective treatment plans for patients. The information obtained from CT scans can guide surgical procedures, radiation therapy, and other interventions, leading to improved patient outcomes.

CO3: Must follow appropriate scanning protocols and employ dose reduction techniques to minimize the amount of radiation the patient receives during the scan. This ensures that the benefits of the CT scan outweigh any potential risks associated with radiation exposure.

Subject: Basic and Cross Sectional Anatomy in CT Imaging

Subject code: MMRIT09

Rationale

CT Cross Sectional Anatomy course typically aims to provide participants with a comprehensive understanding of the anatomical structures as visualized in computed tomography (CT) images. The course focuses on developing the necessary knowledge and skills to accurately interpret CT cross-sectional images of the human body.

At the end of semester student must be able to:

CO1: Participants should be able to identify and label major anatomical structures in CT cross-sectional images, including organs, bones, blood vessels, nerves, and other relevant tissues.

CO2: Will learn to interpret CT images in different planes (transverse, sagittal, and coronal) to gain a complete understanding of the spatial relationships and dimensions of anatomical structures.

CO3: Will become proficient in recognizing normal anatomy across various body regions, enabling them to distinguish variations from pathology.

CO4: Will develop the ability to identify and describe common pathological conditions and abnormalities seen in CT cross-sectional images, such as tumors, inflammation, fractures, and vascular anomalies.

MMRIT Radiological Clinical Education- part III (studentship): 16 hrs/week

The course may offer hands-on training or practical sessions, allowing participants to enhance their skills in teaching and research.

Fourth Semester

Subject: Advancements in CT Technology

Subject code: MMRIT10

Rationale

Advances Techniques in Computed Tomography Technology aims to provide participants with specialized knowledge and skills related to the latest advancements and cutting-edge techniques in the field of Computed Tomography (CT) imaging.

Outcome

At the end of the semester student must be able to:

CO1: Will gain a comprehensive understanding of the latest advancements and cutting-edge techniques in CT imaging. This knowledge may include advanced imaging protocols, reconstruction methods and clinical applications.

CO2: Will give a deeper understanding of advanced CT techniques, participants can potentially improve diagnostic accuracy, leading to better patient outcomes and more effective treatment planning.

CO3: Involved in research and development; the course may inspire new ideas and insights that contribute to the ongoing advancement of CT technology and medical imaging.

CO4: Completion of this advanced course may provide continuing education credits or professional development recognition for individuals in the medical field.

CO5: Acquiring knowledge and skills in advanced CT techniques could lead to expanded career opportunities or increased responsibilities within their respective workplaces.

CIE, Continuous Internal Evaluation; ESE, End Semester Evaluation; L, lecture; T, Tutorial; P, Practical

TUTORIAL ASSIGNMENTS

Tutorials should be planned to enhance learning. The faculty shall decide suitable assignments minimum one per unit based on the curriculum.

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency.

Unit	Topic and content	Hours	Marks
1	Advanced CT Imaging Techniques: Dual-Energy CT Dynamic CT, and iterative reconstruction algorithms. Role of these techniques enhance image quality and improve diagnostic accuracy	4	3
2	CT Angiography (CTA): principles and applications of CT angiography, including vascular imaging, cardiac CTA, CTPA and peripheral CTA. Role of CTA in diagnosing vascular diseases and assessing blood flow.	8	10
3	CT Perfusion Imaging: CT perfusion imaging and its use in assessing tissue perfusion, blood flow, and detecting cerebral or abdominal ischemia.	4	5
4	Dual-Source CT and Multidetector CT (MDCT): benefits of dual-source and MDCT scanners, such as reduced scan times, improved spatial resolution, and decreased radiation dose	4	5
5	Cardiac CT Imaging: cardiac CT imaging, including coronary artery assessment, cardiac function evaluation, and the role of CT in cardiac disease diagnosis, Calcium Scoring.	4	10
6	Radiation Dose Optimization: advanced techniques for optimizing CT scanning protocols to reduce radiation dose while maintaining image quality	2	3
7	Advanced Post-processing Techniques: advanced image post-processing techniques, such as 3D volume rendering, maximum intensity projection (MIP), and multiplanar reconstruction (MPR)	3	5
8	CT-guided Interventions: CT-guided procedures and interventions, including biopsy, drainage and ablation techniques	4	5
9	Virtual CT: Colonoscopy: the techniques used in virtual CT colonoscopy, a non-invasive method for imaging the colon and detecting polyps and other abnormalities Bronchoscopy: technique, post processing and applications.	4	5
10	Advanced Image Reconstruction: advanced image reconstruction techniques such as iterative reconstruction algorithms which improve image quality while reducing radiation dose.	3	5
11	Artifact Reduction Strategies: techniques to minimize and correct artifacts that can arise in advanced CT imaging, ensuring accurate diagnosis and interpretation	4	5
12	Radiation Dose Management: strategies for optimizing CT protocols to reduce radiation dose while maintaining diagnostic image quality.	2	2
13	Contrast Media Innovations: new contrast media agents and protocols used in CT imaging to enhance image contrast and visualization of specific tissues or pathologies, automatic contrast tracking techniques.	2	2
14	Quality Assurance and Image Quality Assessment: quality assurance protocols specific to advanced CT technology and the assessment of image quality.	4	3

15	Emerging Trends in CT: latest developments and emerging trends in CT technology, including artificial intelligence applications and new imaging advancements.	2	2
	Total	54	70

Subject: Quality Assurance, Radiation Protection and Patient care in CT Imaging

Subject code: MMRIT11

Rationale

Radiation Protection and Patient Care in CT course aims to provide participants with essential knowledge and skills related to ensuring patient safety and implementing radiation protection measures during computed tomography (CT) examinations.

Course Outcome

At the end of semester student must be able to:

CO1: Should gain a comprehensive understanding of the principles of ionizing radiation, its interaction with human tissues, and the potential risks associated with radiation exposure.

CO2: Will be familiarized with the ALARA (As Low As Reasonably Achievable) principle and learn techniques to minimize radiation dose to patients while maintaining image quality.

CO3: Should learn strategies for optimizing CT scanning protocols and adjusting parameters to achieve appropriate image quality with the lowest possible radiation dose.

CO4: Radiation Protection Guidelines: Participants will be introduced to national and international radiation protection guidelines specific to CT imaging.

CO5: Will learn proper patient positioning and centering techniques to ensure accurate imaging and reduce the need for repeat scans.

CO6: Should be aware of the unique considerations and radiation protection protocols when imaging paediatric and pregnant patients.

CO7: Will understand the use of contrast agents in CT imaging, their potential risks, and the importance of proper patient screening for allergies and contraindications.

CO8: Should understand the importance of infection control practices in the CT environment, including equipment cleaning and proper hygiene measures.

CO9: Will become aware of ethical and legal responsibilities in providing radiation protection and patient care in CT imaging.

CO10: Will be educated on safety measures and protocols to protect healthcare professionals and staff working in the CT department.

Subject: Basic Pathology and Image Interpretation in CT Imaging

Subject code: MMRIT13

Rationale

Imaging pathology and image interpretation in computed tomography (CT) is to facilitate accurate and early detection, characterization, and evaluation of various medical conditions and abnormalities within the body. CT imaging is a non-invasive, widely available, and valuable medical imaging modality that provides detailed cross-sectional images of the internal structures of the body.

Outcome

At the end of the semester the student must be:

CO1: To Identify diseases and abnormalities at an early stage often leads to better patient outcomes.

CO2: Learn the extent and location of pathologies, aiding in precise diagnosis and treatment planning.

CO3: Will learn CT guide certain medical procedures such as biopsies, drainages, and needle aspirations.

MMRIT Radiological Clinical Education- part IV (studentship): 16 hrs/week

The course may offer hands-on training or practical sessions, allowing participants to enhance their skills in teaching and research.

Handwritten signature

"Curriculum Handbook of Medical Radiology and Imaging Technology (Intellectual Property of the National Commission for Allied and Healthcare Professions, Ministry of Health and Family Welfare)."

Elective – Specialization of MR Imaging Technology Third Semester

Subject: Principles of MR Imaging Technology

Subject Code: MMRT14

RATIONALE

The basic working principles of Magnetic resonance imaging along with the construction and equipments necessary for the image formation, processing, encoding, storage and display. To comprehend the image quality parameters, identify artifacts and assure image quality with the aid of quality assurance tests and tolerance limits.

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Identify the basic physical concepts involved in MRI

CO2: Understand the various imaging parameters that determine image contrast.

CO3: Describe the various image weighting techniques and its application

CO4: To comprehend principles of gradients and spatial encoding.

CO5: Concept of K-space and its traversal involved in MR image formation.

CO6: Knowledge of image quality in MRI images.

CO7: Apply MR imaging parameters in the clinical setting and its trade-off to optimize image quality.

CO8: Ability to minimize image artifacts and understand various Quality assurance tests.

CO9: Precautions and care required during MR Imaging

TUTORIAL ASSIGNMENTS

Tutorials should be planned to enhance learning. The faculty shall decide suitable assignments minimum one per unit based on the curriculum.

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the-identified competency.

Unit	Topic and contents	Hours	Marks
1.	Introduction and Basic principles: Atomic structure and motion, MR active nuclei, Hydrogen MRI, spin precession, Larmor equation, Resonance, Relaxation, T1 and T2 Times.	8	10
2.	Image contrast and weighting: Intrinsic and extrinsic parameters of MR Image contrast, T1, T2 and PD weighting and its applications, T2* decay, FID.	6	8
3.	Spatial Encoding and K-Space: Gradients, Slice selection, frequency and phase encoding, K space basic concept, its filling and traversal, Fast Fourier transform.	4	6
4.	MRI Pulse sequences: Spin echo sequences, Inversions recovery sequences, Gradient eco sequences, echo planar imaging, Parallel imaging.	10	10
5.	MR Instrumentation and Safety: Magnets- types and application, Radio waves, Coils- types and functions, Shielding, Shimming, MR scanner Construction and components, MRI safety considerations, Signage, MR Compatible/conditional/non-compatible devices. AI in MRI.	10	10
6.	Image Parameters and quality: SNR, CNR, Scan time, Spatial Resolution. Trade-offs between parameters.	4	8
7.	MRI Contrast Agents: Mechanism of action, T1 and T2 Agents, classification and applications of contrast agents, doses in adults and pediatrics, Safety considerations in pregnancy and lactation.	6	8
8.	MRI artifacts: Causes, appearance, remedy. Quality assurance tests and tolerance limits.	6	10
Total		54	70

SUGGESTED PRACTICALS/DEMONSTRATION

Sr. No		Hours
1.	Image contrast and distinction between differently weighted images.	10
2.	Manipulating TR and TE for T1, T2 and PD weighted images.	10
3.	Identifying and manipulating various image parameters to maintain image quality	10
4.	Identifying the various types of coils and their uses. Distinction between SE and GRE sequences.	12
5.	Understanding MRI safety principles and patient screening.	10
6.	Contrast agents and its uses, dosage and administration process, time-intensity curves.	10
7.	MRI artifacts	10
	Total	72

Subject: MR Imaging Procedures and Scanning Protocols

Subject Code: MMRIT15

RATIONALE

To comprehend the indications, contraindications, patient preparation, positioning, coils used and other specific considerations while performing the different MRI scan Protocols. Basic understanding of Parameter manipulation and post procedural care.

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Identify the indications and contraindications for various protocols

CO2: Understand the various patient preparation aspects, including history taking and screening.

CO3: Describe the parameters and sequences used to acquire necessary images.

CO4: To comprehend principles of image quality for each type of protocol and the trade-off.

CO5: Types of coils used, positioning and landmark for each anatomical examination.

CO6: Knowledge of Post procedural care.

Subject: Planning, Safety and Patient care in MR Imaging

Subject Code: MMRIT18

RATIONALE

Students comprehend the effects of MRI on the human body, learn the safety aspects to prevent accidents and maintain high image quality while ensuring patient compliance and pleasant patient experience

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Understand the basic safety measures to be taken while performing MRI

CO2: To Ensure optimum patient care

CO3: Identify the various MRI compatible/conditional and non compatible devices and warn patients accordingly.

CO4: To comprehend the various hazards involved in MRI and to know how to prevent Accidents.

CO5: To learn the various MRI facility zones and other MRI Safety considerations.

Subject: Basics Pathology and Image Interpretation in MR Imaging

Subject Code: MMRIT19

RATIONALE

Students comprehend the effects of MRI on the human body, learn the safety aspects to prevent accidents and maintain high image quality while ensuring patient compliance and pleasant patient experience

COURSE OUTCOMES

At the end of the course students will be able to...

- To Identify diseases and abnormalities at an early stage often leads to better patient outcomes.
 - Learn the extent and location of pathologies, aiding in precise diagnosis and treatment planning.
 - Will learn MR guide certain medical procedures such as biopsies, drainages, and needle aspirations.
- Image-guided procedures improve accuracy, minimize risks, and reduce the need for exploratory surgeries.

Subject: Principle of Breast Imaging Technology

Subject Code: MMRIT21

RATIONALE

Mammography is a specialized imaging technique that uses low-dose X-rays to visualize and assess breast tissue. The role of imaging technologist specializing in mammography is crucial in the early detection and diagnosis of breast abnormalities, including breast cancer.

COURSE OUTCOMES

At the end of the course students will be able to...

- C01:** Understand the various components of the mammographic equipment, properly operate it and demonstrate the correct use of compression devices, filtration devices, the magnification setup, exposure controls etc.
- C02:** State the specifications and parameters of physical principles related to mammography (eg. half-value layer, focal spot size, heel effect, source-to-image distance and the minimum requirements).
- C03:** Explain the significance of target/filter combinations.
- C04:** Differentiate between the various types of x-ray generators used in mammography.
- C05:** Discuss and define digital mammography.
- C06:** Define compression, its usefulness and minimum and maximum requirements.
- C07:** State the purpose of magnification.
- C08:** Process digital images if available.
- C09:** Describe a picture archiving and communications system (PACS) and its function.
- C10:** Define digital imaging and communications in medicine (DICOM).
- C11:** Discuss the image storage and viewing capabilities related to digital mammography.

Subject: Breast Imaging Procedures and Scanning Protocols

Subject Code: MMRT22

RATIONALE

Breast Imaging Procedures and Scanning Protocols provide the knowledge base in the type and application of interventional procedures involving breast imaging modalities.

COURSE OUTCOMES

At the end of the course students will be able to...

- C01** Illustrate the sterile technique.
- C02** Describe localization techniques.
- C03** Describe biopsy techniques.
- C04** Delineate galactography.
- C05** Describe specimen imaging guidelines.
- C06** Describe specimen handling and record keeping for pathologic analysis.
- C07** Describe continuous patient care from pre-biopsy to postbiopsy.
- C08** Define patient transport requirements pre and post biopsy.

Subject: Basics and Cross Sectional anatomy of Breast

Subject Code: MMRIT23

RATIONALE

The knowledge of breast anatomy is of paramount importance for Imaging technology students, especially those specializing in mammography or breast imaging. Understanding breast anatomy is crucial for several reasons like proper positioning, differentiating normal and abnormal structure and image interpretation.

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Describe breast structure, developmental stages, and the differences between the male and female breast.

CO2: Identify and label external and internal anatomy of the breast.

CO3: Identify and label the breakdown of the single lobe.

CO4: Identify the three arterial branches supplying the breast and the three venous drainage channels.

CO5: Describe the lymphatic system and lymphatic drainage.

CO6: Correlate breast anatomical structures to mammographic anatomical structures.

MMRIT Radiological Clinical Education- part III (studentship): 16 hrs/week

The course may offer hands-on training or practical sessions, allowing participants to enhance their skills in teaching and research.

Fourth Semester

Subject: Advancements in Breast Imaging Technology

Subject Code: MMRT24

RATIONALE

Advances in breast imaging techniques have been instrumental in improving the early detection, diagnosis, and management of breast conditions, especially breast cancer. These advanced techniques offer several key benefits and rationale for their adoption

COURSE OUTCOMES

At the end of the course students will be able to...

CO1: Describe the uses of computer-aided detection for mammography images.

CO2: Describe the basic theory of digital breast tomosynthesis including appropriate use.

CO3: Identify the value of biomarkers and those specific to breast imaging modalities.

CO4: Discuss dual energy contrast digital mammography and its appropriate use.

CO5: Describe the potential benefits and use of breast elastography.

CO6: Discuss the potential benefits and use of nuclear medicine studies.

CO7: Describe the use of 3-D sonography.

CO8: Discuss the potential benefits and use of abbreviated breast MRI.

CO9: Discuss the use of computed tomography laser mammography (CTLM) and thermography

Subject: Quality Assurance, Radiation Protection and Patient care in Breast Imaging
Subject Code: MMRIT25

RATIONALE

Radiation Protection and Patient care provides an overview of the principles of radiation protection, including the responsibilities of the radiographer for patients, personnel and the public. This content provides the concepts of optimal patient care, including consideration for the physical and psychological needs of the patient and family. Routine and emergency patient care procedures are described, as well as infection control procedures using standard precautions. The role of the Imaging Technologist in patient education is identified.

COURSE OUTCOMES

At the end of the course students will be able to...

C01:	Identify and justify the need to minimize unnecessary radiation exposure of humans.
C02:	Explain the objectives of a radiation protection program.
C03:	Define radiation and radioactivity units of measurement.
C04:	Identify effective dose limits (EDL) for occupational and non-occupational radiation exposure.
C05:	Describe the ALARA concept.
C06:	Identify ionizing radiation sources from natural and man-made sources.
C07:	Comply with legal and ethical radiation protection responsibilities of radiation workers.
C08:	Identify appropriate applications and limitations for each radiation detection device.
C09:	Describe how iso-exposure curves are used for radiation protection.
C10:	Identify performance standards for beam-limiting devices.
C11:	Distinguish between controlled and non-controlled areas and list acceptable exposure levels.
C12:	Describe the function of federal, state and local regulations governing radiation protection practices.
C13:	Role of Radiation safety officer
C14:	Describe personnel monitoring devices, including applications, advantages and limitations for each device.
C15:	Compare values for individual effective dose limits for occupational radiation exposures (annual and lifetime).
C16:	Identify effective dose limits for the embryo and fetus in occupationally exposed women.
C17:	Distinguish between primary and secondary radiation barriers.
C18:	Demonstrate how the operation of various x-ray and ancillary equipment influences radiation safety and describe the potential consequences of equipment failure.

TUTORIAL ASSIGNMENTS

Tutorials should be planned to enhance learning. The faculty shall decide suitable tutorial assignments of minimum one hour per unit based on the curriculum.

THEORY COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency:

Unit	Topic and contents	Hours	Marks
1.	ALARA Principle: Optimizing imaging techniques and using the lowest possible radiation dose are essential components of ALARA.	10	12
2.	Appropriate Indications and contraindications. Technique Optimization: Patient education, consent and preparation, history taking, exposure factors and compression settings based on the patient's breast size and density.	10	14
3.	Mammographic Procedure: Collimation and Field Size, Compression, Receptor Sensitivity (reduction of patient dose), Use of AEC, Patient Comfort.	8	14
4.	Staff Education and Training: Radiation safety protocols, Regular continuing education and training about latest techniques and guidelines. Quality Assurance and Audits: Implement quality assurance programs to monitor and assess radiation dose levels, image quality, and compliance with radiation safety protocols.	8	16
5.	Patient Care in Interventional Mammographic procedures: Pre-procedural care: Knowledge of informed consent, Use of 2 patient identifiers, Hand stop process, Vital signs, Explanation of procedure, Proper documentation During procedure: Patient awareness, Signs of vasovagal reaction and syncope, Signs of allergic reactions to anesthesia, Anxiety, patient compliance. Post-procedural care: Post-procedure imaging for clip placement, compression and wound dressing, instructions and medications prescribed, Follow-up.	18	14
	Total	54	70

SUGGESTED PRACTICALS/DEMONSTRATION

Sr. No		Hours
1.	ALARA Principle	15
2.	Appropriate Indications and contraindications. Technique Optimization	10
3.	Mammographic Procedure	6
4.	Staff Education and Training Quality Assurance and Audits	20
5.	Patient Care in Interventional Mammographic procedures: Pre-procedural care During procedure Post-procedural care	21
	Total	72

Subject: Basics Pathology and Image Interpretation in Breast Imaging

Subject Code: MMRT26

RATIONALE

Imaging Pathology and image Interpretation provides the knowledge about the concepts of breast pathology, detection and diagnosis. This section presents characteristics of benign and cancerous pathologies and their mammographic appearance.

COURSE OUTCOMES

At the end of the course students will be able to...

- CO1: Discuss the factors and physiologic changes that will affect breast tissue composition.
- CO2: Identify physical changes of the breast.
- CO4: Correlate clinical breast changes with imaging findings, and comparison with previous mammograms.
- CO5: Identify the mammographic appearance of pathologies.
- CO6: Describe assessment categories and the recommended clinical follow up.
- CO7: Identify the high risk and low risk factors limited to breast cancer.
- CO8: Describe the etiology, mammographic appearance, diagnosis and treatment of benign breast pathologies.
- CO9: Describe the etiology, mammographic appearance, diagnosis and treatment of malignant breast pathology.
- CO10: Identify the procedures used to diagnosis breast cancer.
- CO11: Describe treatment options for breast cancer.
- CO12: Explain breast cancer stages 0 to IV and stage characteristics.
- CO13: Explain tumor node metastasis (TNM) classifications of breast cancer.
- CO14: Identify the significance of breast cancer detection through patient screening and diagnostic mammograms.
- CO15: Discuss the practice of clinical breast examinations and breast self-examinations, and current evidence-based data about them.
- CO16: Identify the risk factors associated with breast cancer.

TUTORIAL ASSIGNMENTS

Tutorials should be planned to enhance learning. The faculty shall decide suitable tutorial assignments of minimum one hour per unit based on the curriculum.

PRACTICAL COMPONENTS

The following topics/subtopics should be taught and assessed in order to attain the identified competency:

Unit	Topic and contents	Hours	Marks
1.	Breast Anomalies Asymmetry Inverted nipples Accessory nipples Accessory breast tissue Other (e.g. congenital)	8	5
2.	Clinical Breast Changes Lumps: Location, Size, Pain, Mobility, Duration and Other associated indications (e.g. trauma, fever, antibiotics) Thickening: Location, Size and Duration Swelling: Location, Size and Duration Dimpling: Location, Size and Duration Skin irritation and lesions (e.g. moles, keratosis, cysts, ulcers, blisters, scaling): Location, Size and Duration Pain: Location, Duration and New Onset Discharge: Duration, New onset, Color of discharge, Ipsilateral or bilateral, Single duct or multiple ducts and Spontaneous vs. Expressed Nipple retraction, inversion, and areolar changes: Location, Duration and New Onset Edema	20	10
	Erythema Mammoplasty Breast Augmentation: Types: Silicone, Saline Location: Sub-glandular & Subpectoral Breast lift, Breast reduction & Other Reconstructive surgery: Autologous (e.g. TRAM flap, DIEP flap, latissimus dorsi flap), Tissue expander, Implant & Other Post surgical excision Radiation changes		
3.	Mammographic Appearance of Pathology Masses: Definition, Location & Margins Circumscribed Ill-defined(indistinct) Lobulated Spiculated Asymmetric density: Definition & Location Focal asymmetry: Definition & Location Calcifications: Location- Dermal and Internal Causes:	20	15

	Cystic changes, Sutural, Vascular, Malignancy, Characteristics, Number(quantity), Size & Shape Distribution: Clustered or grouped, Segmental, Regional, Diffuse(scattered), Multiple groups Margins Benign characteristics(typical) Coarse Rim or eggshell Milk of calcium(teacup-like) Dystrophic Vascular Skin(superficial) Secretory Fat necrosis Punctate Suspicious morphology (nondeterminate characteristics) Indistinct(amorphous) Pleomorphic, granular (clustered) Irregular Linear Casting		
	Reporting Terminology (e.g BI-RADS) Assessment categories Recommendations		
4.	Interpretation of imaging Density Score, BIRADS, Comparison of mammographic images with other modalities.	10	5
5.	Benign Breast Pathology Cyst, Galactocoele, Fibroadenoma, Lipoma, Hamartoma(fibroadenolipoma), Papilloma, Ductal ectasia, Breast infection/abscess, Hematoma, Fat Necrosis, Radial Scar, Lymph node & Gynecomastia Etiology, Mammographic appearance, Diagnosis and Treatment	10	5
6.	Breast Cancer Classification Stage Characteristics Description Size Invasive vs. Noninvasive Lymph node involvement Spread beyond the breast Stages Stage 0	15	10

	Stage I Stage II Stage III Stage IV TNM classification characteristics TNM description Size Lymph node involvement Metastasis T –size TX T0 Tis T1, T2, T3,T4 N – lymph node involvement NX N0 N1, N2,N3 M –metastasis MX, M0, M1 Cell grade Definition Grade1 Grade2 Grade3 Multifocal Multicentric Hormone receptors andHER2 Importance of tests Estrogen Progesterone HER2		
7.	Risk Factors Associated with Breast Cancer Gender Age Breast density and breast composition Personal history of breast cancer Family history of breast cancer Personal history of female cancer Genetic predisposition Menses: Early age at menarche Late age at menopause Parity: Nulliparity, Primiparity Hormone replacement therapy Obesity Ethnicity Risk assessment models (e.g. Gail, Tyrer Cuzick)	15	10

8.	Breast Cancer Detection Methods		
	Screening mammograms		
	ACS and ACR guidelines		
	Diagnostic mammograms: Clinical findings & Recall from screening	10	10
	Clinical examinations		
	Women aged 20 to 40 years, every 3 years Women older than 40 years, every year Breast self-examinations		
Total		108	70

Evaluation System

There will be no Theory examination at university level for this subject.

Continuous Internal Evaluation (CIE)

Sl. No.	Component	Marks	Weightage	IA marks

SUGGESTED LEARNING RESOURCES

S. No.	Title of Book	Author	Publication
1.	Clinical Breast Imaging: A Patient Focused Teaching File	Gilda Cardenosa	
2.	Interventional Breast Procedures: A Practical Approach	Cherie M. Kuzmiak	
3.	Diagnostic Ultrasound	Carol M. Rumack (Author), Deborah Levine (Author)	Elsevier;

MMRIT Radiological Clinical Education- part IV (studentship): 16 hrs/week

The course may offer hands-on training or practical sessions, allowing participants to enhance their skills in teaching and research.

"Curriculum Handbook of Medical Radiology and Imaging Technology (Intellectual Property of the National Commission for Allied and Healthcare Professions, Ministry of Health and Family Welfare)."

Annexures

MONITORING LEARNING PROGRESS

It is essential to monitor the learning progress of each candidate through continuous appraisal and regular assessment. It not only helps teachers to evaluate students, but also students to evaluate themselves. The monitoring be done by staff of the department based on participation of students in various teaching/ learning activities. It may be structured and assessment shall be done using checklists that assess various aspects. Model checklists are given which may be copied and used.

The learning out comes to be assessed should include:

- e. Acquisition of knowledge: the methods used comprise of 'Log Book' which records participation in various teaching/ learning activities and mentoring of students. The number of activities attended and the number in which presentations are made are to be recorded. The log book should periodically be validated by the supervisors. Some of the activities are listed.
- f. Journal Review Meeting (Journal Club): the ability to do literature search, in depth study, presentation skills, and use of audio- visual aids are to be assessed. The assessment is made by faculty members and peers attending the meeting using a checklist (*see Model Checklist I*).
- g. Seminars/ symposia: the topics should be assigned to the student well in advance to facilitate in depth study. The ability to do literature search, in depth study, presentation skills and use of audio- visual aids are to be assessed using a checklist (*see Model Checklist II*).
- h. Teaching skills: candidates should be encouraged to teach undergraduate students. This performance should be based on assessment by the faculty members of the department and from feedback from the undergraduate students (*see Model Checklist III*).
- i. Work diary/ Log Book- every candidate shall maintain a work diary and record his participation in the training programs conducted by the department such as journal reviews, seminars, etc. Special mention may be made of the presentations by the candidate as well as details of experiments or procedures, if any conducted by the candidate.
- j. Records: records, log books and marks obtained in tests will be maintained by the Head of the Department and will be made available to the University.

Log Book

The log book is a record of important activities of the candidates during his training. Internal assessment should be based on the evaluation of log book. Collectively, log books are a tool for the evaluation of training programme of the institution by external agencies. The record includes academic activities as well as the presentations and procedures carried out by the candidate.

Procedure for defaulters: every department should have a committee to review such situations. The defaulting candidate is counseled by the guide and head of the department. In extreme cases of default the departmental committee may recommend that defaulting candidate be withheld from appearing the examination, if he fails to fulfill the requirements inspite of being given adequate chances to set himself right.

Format of Model Checklists

Checklist- I: MODEL CHECKLIST FOR EVALUATION OF JOURNAL REVIEW PRESENTATIONS

Name of the student:

Date:

Name of the faculty/ observer:

Title of the paper:

Journal detail:

Sl. No.	Items of observation during presentation	Poor 0	Below average 1	Average 2	Good 3	Very good 4
1	Article chosen was					
2	Extent of understanding of scope & objectives of the paper by the candidate					
3	Whether cross- references have been consulted					
4	Whether other relevant references have been consulted					
5	Ability to respond to questions on the paper/ subject					
6	Audio- visual aids used					
7	Ability to defend the paper					
8	Clarity of presentation					
9	Any other observation					
	Total score					
Remarks						

Name and Signature of the Faculty

Checklist- II: MODEL CHECKLIST FOR THE EVALUATION OF THE SEMINAR PRESENTATIONS

Name of the student:

Date:

Name of the faculty/ observer:

Title of the seminar:

Sl. No	Items of observation during presentation	Poor 0	Below average 1	Average 2	Good 3	Very good 4
1	Topic chosen was					
2	Extent of understanding of scope & objectives of the paper by the candidate					
3	Whether cross- references have been consulted					
4	Whether other relevant references have been consulted					
5	Ability to respond to questions on the paper/ subject					
6	Audio- visual aids used					
7	Ability to defend the topic					
8	Clarity of presentation					
9	Any other observation					
	Total score					
Remarks						

Name and Signature of the Faculty

NCAHP
Since-2021

Checklist – III: MODEL CHECKLIST FOR EVALUATION OF TEACHING SKILL

Name of the student:

Date:

Name of the faculty/ observer:

Topic:

Under Graduate batch:

Sl no.	Items to be observed during teaching	Strong Point	Weak Point
1	Communication of the purpose of the talk		
2	Evokes audience interest in the subject		
3	The introduction		
4	The sequence of ideas		
5	The use of practical examples and/or illustrations		
6	Speaking style (enjoyable, monotonous, etc., specify)		
7	Summary of the main points at the end		
8	Ask questions		
9	Answer questions asked by the audience		
10	Rapport of speaker with the audience		
11	Effectiveness of the talk		
12	Uses of AV aids appropriately		
Remarks			

Name and Signature of the Faculty.....

**Checklist- IV: CONTINUOUS EVALUATION OF DISSERTATION WORK
BY GUIDE/ CO- GUIDE**

Name of the student:

Date:

Name of the faculty/
observer: Topic:

Sl. No	Points of observation during presentation	Poor 0	Below average 1	Average 2	Good 3	Very good 4
1	Periodic consultation with guide/ co-guide					
2	Depth of Analysis/ Discussion					
3	Department presentation of findings					
4	Quality of Final Output					
5	Others					
	Total score					
Remarks
