# Scope of the Webposium

The focal theme of the international webposium “**Cancer Burden: threats, challenges and changing paradigms**” has greater importance globally for health management. Cancer is second leading cause of deaths worldwide. As per WHO and ACS report 2020, the global cancer burden has risen to over 18 million new cases and 9.6 million deaths, which is estimated to grow to 27.5 million by 2040. India is likely to have over 17.3 lakh new cases of cancer and over 8.8 lakh deaths due to the disease by 2020, with cancers of breast, lung and cervix topping the list. Currently researches are focusing on the greater understanding of the response and association of physiological clinical cofactors with cancer treatment including the role of various cellular signaling networks. Cancer can be reduced and controlled by implementing evidence-based strategies for cancer prevention, early detection of cancer, and patient management. Researchers and medical practitioners have become highly important domain in society to spread the knowledge about cancer, as well as towards developing new diagnostic and therapeutic modalities against cancer. The webposium will provide an unique platform to bring together scientists, academia and clinicians to deliberate on the important issues relating to the threats and challenges in the changing paradigms of cancer. The event will be helpful to the students and scholars, researchers and postdoctoral fellows, teaching and research faculty, and clinicians. The event will also be equally beneficial to the society to disseminate knowledge on the myths and facts about cancer, and management of personal health.
